"One Rotten Apple Spoils the Whole Barrel": The Plant Hormone Ethylene, the Small Molecule and its Complexity Domenico De Martinis, Tomotsugu Koyama, Caren Chang, 2015-08-14

The gaseous molecule ethylene C_2H_4 which is small in size and simple in structure is a plant hormone most often associated with fruit ripening yet has a diversity of effects throughout the plant life cycle While its agricultural effects were known even in ancient Egypt the complexity of its mode of action and the broad spectrum of its effects and potential uses in plant physiology remain important scientific challenges today In the last few decades the biochemical pathway of ethylene production has been uncovered ethylene perception and signaling have been molecularly dissected ethylene responsive transcription factors have been identified and numerous effects of ethylene have been described ranging from water stress development senescence reproduction plant pathogen interactions and of course ripening Thus ethylene is involved in plant development in biotic and abiotic stress and in reproduction There is no stage in plant life that is not affected by ethylene modulated by a complex and fascinating molecular machinery

The Psychology of Magic and the Magic of Psychology Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18

Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise

detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception Profitability, Productivity, and Sustainability Dennis Onyama, 2021-06-17 This book presents an in depth study of how the drive to optimize organizational performance can be significantly improved by investigating the causal relationships between profitability productivity and sustainability PPS This is presented through an assessment of a triple combined therapy that studies the interplay between Organizational DNA Strategic Alignments for Value and their implications for Sustainability Through this approach this volume seeks to answer critical mind searching questions and provide useful guides as to how some firms are able to sustainably create higher value or wealth especially through corporate entrepreneurship or via the creation of new business models than others In tackling the three elements of profitability productivity and sustainability this book also provides greater insight through an in depth study of the pervasively unresolved and disturbing issues surrounding the prospects of increasing the chances of success for entrepreneurial start off ventures making it of value to researchers academics and students in the fields of organizational studies strategy and sustainability A Hidden Economy Maria Bargh, 2015-11-02 The M ori economy is often defined simply by the contributions of M ori in New Zealand in the areas of farming fisheries and forestry This book explores the ways that M ori in the privatised military industry contribute in monetary and non monetary ways to the M ori economy Workers in the privatised military industry very rarely if ever give interviews about their work or details about their pay However this book includes five interviews with M ori who have worked or are still working in the privatised military industry and explores how they articulate themselves as M ori in the industry giving a glimpse at this secret world and how M ori operate in it **Fire Craft** Erin E. O'Connor, 2025-08-12 Glassblowing by hand might seem like a dying art yet it is thriving Studios and universities offer popular classes and glass art is widely exhibited and sold Amateur and professional glassblowers alike are captivated by the choreography of fire smoke and molten material Why are people drawn to this ancient craft What is distinctive about the social physical and intellectual experience of glassblowing How does the body learn an art In Fire Craft Erin E O Connor interweaves an immersive firsthand account of her experiences learning to blow glass with a sensuous ethnography of embodiment and community among glassblowers Through compelling stories such as her struggle to produce an elegant goblet she shows how a novice becomes hooked by and committed to a craft Reflecting on embodied knowledge O Connor considers how we negotiate mistakes and failures how we strive to develop proficiency in the face of shortcomings and how through making objects we make meaning She also explores the history of glassblowing and how various social environmental and knowledge frameworks shape the valorization of craft From the furnaces of empire to the hot bodies of collaboration and love O Connor reveals the interconnectedness of the body with the elemental world A gripping tale of the social world and experience of glassblowing Fire Craft passionately defends practical labor as intellectual work that changes self and society
