TITLE/TOPIC	<u>Mobile gadgets control our relationships</u>
INTRODUCTION	It's certain that technology has made interactive between one another significantly easier. In that reason, many people are now normally using mobile gadgets to connect with people. In fact, according to Statista, as of January 2021, there were 4.66 billion active internet users worldwide - 59.5 percent of the global population. Of this total, 92.6 percent (4.32 billion) accessed the internet via mobile devices. From what these devices can show and provide for the users, there's no surprise that these mobile gadgets can greatly affect the relationships of the users to the point where it already controls a persons' relationship with his peers.
DISCUSSION	<p>Using mobile gadgets are fun for sure— everything is always a click away. Even dating sites are a click away, meeting people, hooking up, getting rejected is easier than ever. We can do a lot of entertaining things and connecting with people around the world never felt so easy. But people nowadays depend more on their gadgets to get by. In the modern day, many people live in the digital world more than the real world. According to DJ Wardynski, Human interactions and relationships have thus largely decreased, while intimacy and human-to-human interactions have been replaced with human-to-machine interactions. No strong relationship can last long if people do not utilize social skills to meet potential mates, if they just simply swipe through a "catalog" of people. And such happenings are made by using applications in our gadgets.</p> <p><i>"Nothing kills romance faster than pulling out a smart phone."</i> Oaklander said in an article. It is not uncommon for couples to spend less and less time actually talking with each other, and more time glued to their mobile devices or TV sets. In the study, published in the journal <i>Psychology of Popular Media Culture</i>, people who felt that their partners were overly dependent on their devices said they were less satisfied in their relationship. It only shows that because of the lack of intimacy, and more of usage and dependency of the people with their phones, people tend to have frail relationships with other people. Even with our parents and friends.</p> <p>Additionally, ghosting (simply disappearing from the digital world when one is no longer interested) is often very frequent, which results from a lack of social skills - or courage - to end a relationship in the old-fashioned way. This has often resulted in a myriad of shallow relationships, and a great reduction in intimacy which directly affects the way people operate, the values and expectations people have, and the way people think about others.</p>
CONCLUSION	In conclusion, mobile gadgets do help people to connect, interact, and develop with each other. But then again, it has the tendency to ruin one's relationship when used incorrectly. In the end, it's still the person who'll decide what actions he'll be doing. Letting the virtual world consume you will lead to some instances where you can't connect with people physically and instead, it can push them farther. The correct and appropriate use of mobile gadgets can be the key in order to stay in
