

# Paper Helicopter Experiment

## Introduction

Customers of CHC (Cellulose Helicopter Company) have been complaining about the limited flight time of CHC helicopters as the one shown in Figure 1. A team of CHC engineers, pilots, managers and field representatives is formed to study how the standard CHC helicopter design might be modified to prolong the flight time without deterioration in stability and flying capacity.

A large number of factors that might affect the flight time are proposed during a brainstorming session, but the list is finally limited to 7 factors which are to be studied through a full factorial experiment.

Figure 1. Paper helicopter.

## Design objective

The task is to plan, run, analyze and document a factorial experiment with the aim to improve the CHC helicopter construction to prolong the flight time. Due to the low cost of the prototypes, the company wants to obtain the maximum information possible for the design, and therefore a full factorial design is selected. Since flight time may be affected by different noncontrollable factors, five repetitions of each experiment will be carried out.

This task involves building 128 prototypes and performing 640 experiments. It is estimated that 100 person-hours are required to complete it.

All the raw materials needed to build the prototypes will be provided.

## Deliverables

At this stage of the process, your task is to build the prototypes, carry out the experiments and report back the results to CHC Engineering office. The factors and levels to be considered are shown in
