

The 20th Anniversary of the *IEEE Transactions on Pattern Analysis and Machine Intelligence*

Kevin Bowyer, Pat Flynn, and Rangachar Kasturi

1 INTRODUCTION

Welcome to the "20th Anniversary Special Issue" of the *IEEE Transactions on Pattern Analysis and Machine Intelligence*. Over the past 20 years, there have been many important advances in the areas of interest to the PAMI community. In this issue, we are pleased to be able to present a collection of five survey papers that reflect our developments in selected areas. These five papers, of course, do not address all areas of interest to the PAMI community. In fact, we hope to have additional surveys appear in a future issue. TPAI editorial policy strongly encourages authors in what might be termed "value added" survey papers in all major areas of interest to the PAMI community. By "value added," we mean to indicate a paper that gives the reader something beyond that of a single annotated bibliography or a plain survey. We look for an additional level of insight into what works and what doesn't why, and what the open issues are.

2 BRIEF HISTORY OF TPAI

The *IEEE Transactions on Pattern Analysis and Machine Intelligence* (TPAMI) was started in February 1979 as a quarterly publication with an annual page budget of 800 pages under the leadership of King-Sun Fu. The Sun Wang, then president of the IEEE Computer Society, wrote in the inaugural issue, "The first paper in this issue published in *IEEE Transactions on Computers* dates back over ten decades... The Computer Society has sponsored or participated in several conferences on pattern analysis and machine intelligence... The Computer Society is also an active member of the International Association for Pattern Recognition... There has been a lack of publications... for papers in this broad area of interest. The publication of this quarterly is intended to meet such a demand." TPAMI quickly became a success in 1980 and the subscriptions jumped from 2,000 to 7,000 in the first three years. It reached a peak of over 10,000 in the late 1980s before settling down to the current level of approximately 7,500. TPAMI became a monthly in 1989 and reached its present size of 1,400 editorials/pages in 1998.

Editorial direction and leadership for TPAMI has been provided by King-Sun Fu (1979-1987), Thao Pavlidis (1987-1989), Marvin L. Tanimoto (1989-1990), Alan K. Jain (1991-1994), and Rangachar Kasturi (1995-1998) during its first two decades. They were assisted by many outstanding individuals in various capacities such as advisory editor, associate editor, guest editor, and production editor. A list of associate editors is included at the end of this editorial.

Topics of papers published in TPAI, as well as its editorial scope, have gradually changed over time to reflect the changes in research trends, as well as the introduction of other IEEE publications covering topics their audience covered in TPAI. The first issue of TPAI listed topics such as speech analysis, natural language analysis, and inference systems in its scope. Since TPAI established itself as the premier journal for papers in pattern recognition and computer vision, the early years of TPAI also saw the debate concerning the balance between the P and M components. This continued for quite some time until TPAI became established as the leading journal of our field.

One of the constant concerns for editors of TPAMI during the first two decades was the review/revision/publication cycle time. This is reflected by comments such as the following—"most common suggestion was that I should speed up the editorial process" in an editorial by Pavlidis in September 1982, "we will be working to expand the editorial board ... to reduce the time" in an editorial by Tanimoto in November 1988, "one of the serious concerns ... are delays in the review... and the publication date once a manuscript has been accepted" in an editorial by Jain in February 1991, and "I am concerned [about] our publication backlog" in an editorial by Kasturi in February 1996. We are fortunate that, as a result of many actions taken by the pool editor and the cooperation of the entire TPAMI community, this problem has finally been solved. In recent months, we have had papers appear in print in as short as six months from the time of submission (for additional comments below).

3 THIS 20TH ANNIVERSARY ISSUE

The *IEEE Transactions on PAMI* has actually just completed its 21st year of publication. The except for this special issue began before TPAMI had completed its 20th year, under Rangachar Kasturi's term as PEC. The natural constraints of editorial planning, authors' creative ideas, reviews, and production led to the first group of survey papers appearing in this issue. Due to constraints of scheduling and length, several additional survey papers recognizing this occasion should appear in another issue in the near future.

Advances in Applied Nonlinear Optimal Control Gerasimos Rigatos,Electra Karapanou,2020-11-19 This

volume discusses advances in applied nonlinear optimal control comprising both theoretical analysis of the developed control methods and case studies about their use in robotics mechatronics electric power generation power electronics micro electronics biological systems biomedical systems financial systems and industrial production processes The advantages of the nonlinear optimal control approaches which are developed here are that by applying approximate linearization of the controlled systems state space description one can avoid the elaborated state variables transformations diffeomorphisms which are required by global linearization based control methods The book also applies the control input directly to the power unit of the controlled systems and not on an equivalent linearized description thus avoiding the inverse

transformations met in global linearization based control methods and the potential appearance of singularity problems. The method adopted here also retains the known advantages of optimal control that is the best trade off between accurate tracking of reference setpoints and moderate variations of the control inputs. The book's findings on nonlinear optimal control are a substantial contribution to the areas of nonlinear control and complex dynamical systems and will find use in several research and engineering disciplines and in practical applications.
