ScanWise Implant

Simplify scanning of patients with **MR Conditional implants**

By Johan van den Brink, Cecilia Possanzini, Marius van Meel, Jan Groen, Tom Geraedts, Sjoerd Last, Jan Konijn, Miteshkumar Mitra, Paul Kaufholz, Arianne van Mulswinkel, Paul Harvey

Patients with implants are not scanned routinely in MRI systems. Warning signs prohibit entrance to patients with a pacemaker, a hip implant, a clip or vascular coil, or any other device implanted in or worn on the body. Rigorous prescreening procedures apply, to identify patients with implants before they undergo an MRI examination.

In recent years, however, many MR Conditional implants have become available, and patients with such implants can now benefit from MR imaging. Nevertheless, scanning patients with MR Conditional implants remains challenging.

How confident are you that you can meet the MR Conditional requirements in your MRI practice? How do you explain to your neurologists, orthopedic, or vascular surgeons, and cardiologists that you can provide MRI services for patients with implants? How can you train your radiographers to apply the required limits to MR sequences if they cannot dial in the specified numbers? Furthermore, how do they prevent the MRI system from inserting pre-scans or system adjustments which exceed the constraints?

Philips has developed ScanWise Implant to simplify scanning of patients with MR Conditional implants. It provides you with the guidance and automatic features to easily meet the implant manufacturers MR Conditional specifications. It is as easy as entering patient demographics during the registration process. You can verify the static field strength and the Spatial Field Gradient in an interactive user interface, and copy the specific absorption rate (SAR) and other specifications from the implant label to the MRI scans on the patient registration screen. This sets the limits for the entire examination. No need to check each individual sequence; the system takes care of the constraints.

This publication provides an overview of our new ScanWise Implant technology that supports you in meeting current MR Conditional labeling requirements.

MRI in Veterinary Neurology Adriano Wang-Leandro,2024-11-18 Magnetic resonance imaging is without a doubt a key diagnostic tool in clinical veterinary neurology Its implementation in animals dates to the early 80s as dogs were used as experimental model for brain edema and abscesses however it was not until one decade later that this modality was implemented for clinical purposes in veterinary neurology As the availability of low and high field magnets in veterinary centers increase and technology advances the understanding of central nervous system pathologies in the pre mortem phase including temporal evolvement of disease and monitoring effects of therapeutic approaches to the nervous tissue morphology has been likewise enhanced Moreover MRI findings of multiple diseases affecting the nervous system of animals including epilepsy meningoencephalitis neurodegenerative disorders metabolic encephalopathies spinal cord injury among others mirror their counterpart in human medicine therefore highlighting the pivot role of this modality for translational medicine

Advanced Quantitative Indexes in Cardiovascular Magnetic Resonance Imaging Xiaoyue Zhou, Rob J. Van Der Geest, Yucheng Chen, Peng Hu, Ming Yen

Ng, 2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing the early change of myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods However there

are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease Besides quality control and standardization of those indexes become crucial when promoting them into clinical practice This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes CMRI techniques such as myocardial strain analysis quantitative myocardial tissue mapping 2 dimensional 4 dimensional flow quantification and quantitative perfusion will be of our interest The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and or the added value of those indexes in disease diagnosis and prognosis Meanwhile quality control and standardization of the advanced CMRI indexes in multi centre multi vendor research projects will be discussed
