

Respironics NM3 highlights

The Respironics NM3 non-invasively monitors volumetric ($\dot{V}CO_2$) and end-tidal ($EtCO_2$) capnography. Clinicians can use this information to minimize the duration of mechanical ventilation and optimize the potential for successful extubation when managing critically ill patients. At every stage of care, the NM3 monitors the patient's response to ventilation. Bright, sharp, and well organized display screens present physiologic information on the patient's readiness for less support and spontaneous breathing trials ($\dot{V}CO_2$, MV_{Vol} , V_d/V_t). The lightweight, portable design allows inter-departmental use on ventilated patients and those under deep and conscious sedation.

Key applications

- Confirm proper endotracheal tube placement
- Determine true alveolar tidal volume, independent of dead space
- Determine the effects of ventilator changes before the first ABG is drawn
- Monitor appropriate PEEP levels, alveolar recruitment, and pulmonary perfusion
- Obtain non-invasive cardiac output measurements
- Assess readiness for weaning and extubation
- Monitor patients post-extubation and under conscious sedation
