by Brianna Chang, Mastbaum Area Vocational Technical School,  
Philadelphia, 2010 (edited by S.Belperain)

### Construct Your Puzzle Pieces

1. Obtain 9 squares of paper – these will be your puzzle pieces.

2. In each square, you will write in the chemical formula for one of the molecules involved in the processes of photosynthesis and cellular respiration. Use the following terms:

- |      |   |                                 |
|------|---|---------------------------------|
| i.   | CO <sub>2</sub>                               | carbon dioxide                  |
| ii.  | H <sub>2</sub> O                              | water                           |
| iii. | C <sub>6</sub> H <sub>12</sub> O <sub>6</sub> | _____ (food/carbohydrate/sugar) |
| iv.  | O <sub>2</sub>                                | oxygen                          |
| v.   | ENERGY  |                                 |

3. In the spaces provided above, write the NAME of the molecule next to its chemical symbol for your reference.

4. In the remaining squares on your paper, write in symbols you will need to complete your chemical reaction. You will need 3 "+" symbols and one "-" symbol.

In a chemical reaction, what does the "-" symbol signify? **it shows the chemical change**

### Put Your Pieces Together: PHOTOSYNTHESIS

1. Arrange your pieces into the chemical equation for photosynthesis.

Write this equation below:

2. (Use the NAMES of the molecules) According to your equation, the process of photosynthesis uses carbon dioxide, water, and sunlight to produce CO<sub>2</sub> and H<sub>2</sub>O.

Becklin, Joy K. Ward, Danielle A. Way, 2021-05-31 Changes in atmospheric carbon dioxide concentrations and global climate conditions have altered photosynthesis and plant respiration across both geologic and contemporary time scales Understanding climate change effects on plant carbon dynamics is critical for predicting plant responses to future growing conditions Furthermore demand for biofuel fibre and food production is rapidly increasing with

the ever expanding global human population and our ability to meet these demands is exacerbated by climate change This volume integrates physiological ecological and evolutionary perspectives on photosynthesis and respiration responses to climate change We explore this topic in the context of modeling plant responses to climate including physiological mechanisms that constrain carbon assimilation and the potential for plants to acclimate to rising carbon dioxide concentration warming temperatures and drought Additional chapters contrast climate change responses in natural and agricultural ecosystems where differences in climate sensitivity between different photosynthetic pathways can influence community and ecosystem processes Evolutionary studies over past and current time scales provide further insight into evolutionary changes in photosynthetic traits the emergence of novel plant strategies and the potential for rapid evolutionary responses to future climate conditions Finally we discuss novel approaches to engineering photosynthesis and photorespiration to improve plant productivity for the future The overall goals for this volume are to highlight recent advances in photosynthesis and respiration research and to identify key challenges to understanding and scaling plant physiological responses to climate change The integrated perspectives and broad scope of research make this volume an excellent resource for both students and researchers in many areas of plant science including plant physiology ecology evolution climate change and biotechnology For this volume 37 experts contributed chapters that span modeling empirical and applied research on photosynthesis and respiration responses to climate change Authors represent the following seven countries Australia 6 Canada 9 England 5 Germany 2 Spain 3 and the United States 12

**Photosynthesis, Productivity, and Environmental Stress** Parvaiz Ahmad, Mohammad Abass Ahanger, Mohammed Nasser Alyemeni, Pravej Alam, 2019-09-10 A guide to environmental fluctuations that examines photosynthesis under both controlled and stressed conditions Photosynthesis Productivity and Environmental Stress is a much needed guide that explores the topics related to photosynthesis both terrestrial and aquatic and puts the focus on the basic effect of environmental fluctuations The authors noted experts on the topic discuss photosynthesis under both controlled and stressed conditions and review new techniques for mitigating stressors including methods such as transgeneics proteomics genomics ionomics metabolomics micromics and more In order to feed our burgeoning world population it is vital that we must increase food production Photosynthesis is directly related to plant growth and crop

production and any fluctuation in the photosynthetic activity imposes great threat to crop productivity. Due to the environmental fluctuations, plants are often exposed to the different environmental stresses that cause decreased photosynthetic rate and problems in the plant growth and development. This important book addresses this topic and covers topics related to terrestrial and aquatic photosynthesis. Highlights the basic effect of environmental fluctuations. Explores common stressors such as drought, salinity, alkalinity, temperature, UV radiations, oxygen deficiency, and more. Contains methods and techniques for improving photosynthetic efficiency for greater crop yield. Written for biologists and environmentalists. *Photosynthesis Productivity and Environmental Stress* offers an overview of the stressors affecting photosynthesis and includes possible solutions for improved crop production.
