

Photosynthesis

How do light-dependent and light-independent reactions provide food for a plant?

Why?

Plants are the original solar panels. Through photosynthesis a plant is able to convert electromagnetic (light) energy into chemical energy. This energy is used not only to keep the plant alive, but also to sustain all creatures that rely on the plant for food and shelter. Plants and photosynthetic algae are also the source of all oxygen on Earth, allowing the inhabitants of Earth to benefit from our most plentiful renewable energy resource.

Plant cell
2. The structures inside the organelle in Model 1 are called thylakoids. What compound necessary for photosynthesis is contained in the thylakoids?

Photosynthesis, Photorespiration, And Plant Productivity Israel Zelitch, 2012-12-02 Photosynthesis Photorespiration and Plant Productivity provides a basis for understanding the main factors concerned with regulating plant productivity in plant communities The book describes photosynthesis and other processes that affect the productivity of plants from the standpoint of enzyme chemistry chloroplasts leaf cells and single leaves Comprised of nine chapters the book covers the biochemical and photochemical aspects of photosynthesis respiration associated with photosynthetic tissues and photosynthesis and plant productivity in single leaves and in stands It provides illustrated and diagrammatic discussion and presents the concepts in outlined form to help readers understand the concepts efficiently Moreover this book explores the rates of enzymatic reactions and the detailed structure and function of chloroplasts and other organelles and their variability It explains the mechanism of photosynthetic electron transport and phosphorylation and the importance of diffusive resistances to carbon dioxide assimilation especially the role of stomata It also discusses the importance of dark respiration in diminishing productivity the differences in net photosynthesis that occur between many species and varieties and the influence of climate to photosynthetic reactions The book is an excellent reference for teachers as well as undergraduate and graduate students in

biology plant physiology and agriculture Research professionals working on the disciplines of plant production and food supply will also find this book invaluable Photosynthesis and the Environment N.R. Baker, 2006-07-06 Photosynthesis and the Environment examines how photosynthesis may be influenced by environmental changes Structural and functional aspects of the photosynthetic apparatus are examined in the context of responses to environmental stimuli particular attention being given to the processing of light energy by thylakoids metabolic regulation gas exchange and source sink relations The roles of developmental and genetic responses in determining photosynthetic performance are also considered The complexity of the responses to environmental change is demonstrated by detailed analyses of the effects of specific environmental variables light temperature water CO₂ ozone and UV B on photosynthetic performance Where appropriate attention is given to recent developments in the techniques used for studying photosynthetic activities The book is intended for advanced undergraduate and graduate students and a wide range of scientists with research interests in environmental effects on photosynthesis and plant productivity Photosynthesis: Physiology and Metabolism Richard C. Photosynthesis and Respiration Progress Report J. Mayo,1970 **The Relation of Photosynthesis to Respiration** John Wolfgang Weigl,P. M. Warrington,Melvin Calvin,1950 The gas exchange by barley leaves of oxygen carbon dioxide and added radiocarbon dioxide has been measured in a closed system with the following results 1 Carbon dioxide

follows different but not necessarily independent paths in photosynthesis and light respiration 2 The carbon of newly formed photosynthetic intermediates is not available for respiration while the light is on but becomes immediately respirable in the dark The enhancement of dark respiration after a light period is largely due to built up photosynthates 3 Photosynthesis proceeds at a measurable rate even at the lowest CO₂ pressures observed 0.03 mm Hg There is no evidence for a threshold concentration of carbon dioxide for the reaction at the lowest concentrations reached respiration exactly equals assimilation 4 The mean rate of respiratory CO₂ evolution in strong light was found to be less than that in the dark Internal re photosynthesis of respiratory carbon may have been sufficient to account for this effect 5 The assimilation of C¹⁴O₂ is about 17% slower than that of C¹²O₂ *Photosynthesis & Respiration*[Cathrine M.
