The accessory drive component is located on the front of the engine and consists of an alternator (3), an A/C compressor (4), and a boost compressor (7). The accessory drive component is driven via the crankshaft by a multi-rib belt that is tensioned using a mechanical belt tensioner (6). Even the vibration damper on these engine variants has an integrated releaser that takes up the engine's pulsations to the belt, where the alternator does not have a freewheel function. The multi belt, including tensioner and idler wheel (2), must be replaced at an interval of 240 000 km.
