Same procedure will be used to check the Open MPI command `mpiexec`:

```
which mpiexec
```

The following outcome will justify the correct installation:

```
/usr/bin/mpiexec

5 Visualization Toolkit: VTK

The open source Visualization Toolkit (VTK) is a object-oriented high level library for data processing and visualization. We can clone VTK with Git by using the following command:

```
git clone git://vtk.org/VTK.git VTK
```

In next steps we go to VTK directory by using command:

```
cd ~/home/"user"/VTK
```

Now we should generate Makefile in the current directory using:

```
cmake cmake
```

Using `make` command we execute this, build the programs, using generated makefile as an input:

```
cmake make
```

In order to install `lib_` as well `cmake` files under `usr/local/` we use the following command:

```
cmake make install
```

For convenience reason it is useful to create symbolic links (short `cat`) of `/usr/local/include/vtk-5.8` and `/usr/local/lib/vtk-5.8` to global environment. In order to do this we go to `/usr/local/include` by using the command:

```
cd /usr/local/include
```

Now the following command will create a symbolic link named `vtk` of `vtk-5.8` inside `/usr/local/include`:
