Enhancing Quality in Higher Education Ray Land,George Gordon,2013-06-19 Interest in the quality of higher education provision has been steadily increasing over the last twenty years This has been driven largely by the international creation of explicit policies and reporting requirements to review audit and evaluate provision The interest is associated in many countries with the granting by governments of greater autonomy to higher education institutions This crucially comes bound with increased requirements for accountability in the exercise of such power Enhancing provision promoting innovation cultivating exploration and adopting information led approaches to practice are at the very heart of higher education As such quality enhancement comes in many guises and is under constant scrutiny Enhancing Quality in Higher Education looks critically at recent developments in higher education taking snapshots of changing practices around the world and analysing the varied theoretical perspectives of quality enhancement that are emerging The opening section draws upon this theoretical base whilst the second section contextualises it through the analysis of a diverse range of international case studies The concluding section considers future prospects for the

enhancement agenda in the light of the international pressures facing all systems of higher education in the future Policy will inevitably be shaped by the historical contexts within which national systems are located The book draws on a wide range of international case studies examined by a host of contributing experts The movement towards quality enhancement can be seen as stimulating action at the grassroots of the academy to self generate improvement It is a counter to the prevalent view that change in higher education is essentially about the institutional response to increasing societal pressure and state control and as such is a welcome contribution to the literature This comprehensive volume is essential reading for anyone involved in higher education and educational policy Canada 2015-2016 Wayne C.  International Affairs University of South Africa **Labour Law in the Netherlands** Antoine T.J.M. Jacobs,2020-05-21
 Derived from the renowned multi volume International Encyclopaedia of Laws this monograph on the Netherlands not only
 describes and analyses the legal aspects of labour relations but also examines labour relations practices and developing
 trends It provides a survey of the subject that is both usefully brief and sufficiently detailed to answer most questions likely
 to arise in any pertinent legal setting Both individual and collective labour relations are covered in ample detail with
 attention to such underlying and pervasive factors as employment contracts suspension of the contracts dismissal laws and
 covenant of non competition as well as international private law The author describes all important details of the law
 governing hours and wages benefits intellectual property implications trade union activity employers associations workers
 participation collective bargaining industrial disputes and much more Building on a clear overview of labour law and labour
 relations the book offers practical guidance on which sound preliminary decisions may be based It will find a ready
 readership among lawyers representing parties with interests in the Netherlands and academics and researchers will
 appreciate its value in the study of comparative trends in laws affecting labour and labour relations **Diamond Warriors**
in Colonial Namibia Job Shipululo Amupanda,2022-07-06 Diamond Warriors in Colonial Namibia enters into uncharted
 scholarly territory of illegal diamond smuggling at the largest diamond mining company in colonial Namibia De Beers
 Consolidated Diamond Mines of South West Africa CDM It details the underground activities of the natives migrant workers
 employed by the CDM and how these illicit activities accounted for rapid development in Owamboland Beyond this account
 the book takes on the deterministic natural resource curse theory that equates natural resource endowments to a curse
 resulting in underdevelopment and sometimes conflict It is argued and proven herein from a decolonial standpoint that such

an approach is an oversimplification of the political economy of natural resources in Africa in general and Namibia in particular The text also provides a contextual account of the contract labour system and details the symbiotic relationship between CDM and the colonial state before highlighting the remaining unanswered questions and areas of further research

Star Ark Rachel Armstrong, 2016-11-13 As space ventures have become more numerous leading scientists and theorists have offered ways of building a living habitat in a hostile environment taking an ecosystems view of space colonization The contributors to this volume take a radical multi disciplinary view of the challenge of human space colonization through the ongoing project Persephone This book fundamentally challenges prevalent ideas about sustainability and proposes a new approach to resource austerity and conservation and providing truly sustainable approaches that are life promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus Interstellar s plans for the design and engineering of a living interior on a worldship to be constructed in Earth s orbit within 100 years Although the timeframe itself is only an estimate since it is contingent on many significant developments including funding and technological advances the industry consensus is that within 100 years we will see manned space exploration beyond our solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a bucolic suburbia as proposed by Gerard O Neill in the 1970s this worldship will provide the pre conditions for sustaining life beyond Earth s environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of multi disciplinary thinkers who shed light on the brave new future ahead from different angles [IDIHOM: Industrialization of High-Order Methods - A Top-Down Approach](#) Norbert Kroll, Charles Hirsch, Francesco Bassi, Craig Johnston, Koen Hillewaert, 2015-01-02 The book describes the main findings of the EU funded project IDIHOM Industrialization of High Order Methods A Top Down Approach The goal of this project was the improvement utilization and demonstration of innovative higher order simulation capabilities for large scale aerodynamic application challenges in the aircraft industry The IDIHOM consortium consisted of 21 organizations including aircraft manufacturers software vendors as well as the major European research establishments and several universities all of them with proven expertise in the field of computational

fluid dynamics After a general introduction to the project the book reports on new approaches for curved boundary grid generation high order solution methods and visualization techniques It summarizes the achievements weaknesses and perspectives of the new simulation capabilities developed by the project partners for various industrial applications and includes internal and external aerodynamic as well as multidisciplinary test cases **Manson's Tropical Diseases E-Book**

Orthodox macroeconomics is founded on microeconomics Heterodox economists either reject micro foundations or experiment with behavioural relationships without paying attention to the principles that generate them The book takes off from Michal Kalecki s aphorism about economics being a science that confused stocks and flows Kalecki was famous for presiding over a marriage between Marx and Keynes and all three figure prominently in the volume However the first part of the title is a homage to Wynne Godley who pioneered stock flow consistent modeling in our times The authors exploit lagged values of variables emerging from the definitions Lags also emerge in so called stock flow norms connecting the aggregates Some moving and shaking of identities and a difference or differential equation emerges The requirements for stability of the dynamic systems are illuminating and the reader can stop at structure and history with the first half of the book The conversation with orthodoxy begins with the second part The equivalent equation systems of the first part throw up different pairs of characters whose happiness must be maximised over time The price to pay through the solution process is the confrontation with many ugly expressions but the explicit calculations are undertaken repeatedly only to reassure students through drillwork that tedium is not the same as difficulty The payoffs are that variable transitions in capitalism the second part of the title are captured from a small clutch of identities The movements from backward agriculture to capitalism from golden age capitalism to financialization are modeled A separate chapter is devoted to Europe The policy prescriptions of heterodox economics do not compare with the richness of critique and positive analysis Positive and normative are one in this work the combination of stock flow norms along with forgotten policy variables like the tax rate promising order and stability to economies **The Analyst** ,1876 The Analyst publishes research articles in pure mathematics Theoretische
