Tailoring NK Cell Receptor-Ligand Interactions: an Art in Evolution, 2nd Edition

Ulrike Koehl, Antoine Toubert, Gianfranco Pittari, 2018-11-13 Recognition and killing of aberrant infected or tumor targets by Natural Killer NK cells is mediated by positive signals transduced by activating receptors upon engagement of ligands on target surface. These stimulatory pathways are counterbalanced by inhibitory receptors that raise NK cell activation threshold through negative antagonist signals. While regulatory effects are necessary for physiologic control of autoimmune aggression, they may restrain the ability of NK cells to activate against disease. Overcoming this barrier to immune surveillance: multiple approaches to enhance NK mediated responses are being investigated since two decades. Propelled by considerable advances in the understanding of NK cell biology, these studies are critical for effective translation of NK based immunotherapy principles into the clinic. In humans, dominant inhibitory signals are transduced by Killer Immunoglobulin Like Receptors (KIR) recognizing cognate HLA class I on target cells. Conversely, KIR recognition of missing self HLA due to HLA loss or HLA KIR mismatch triggers NK mediated tumor rejection. Initially observed in murine transplant models, these antitumor effects were later found to have important implications for the clinical outcome of haplotype mismatched stem cell transplantation. Here, donor NK subsets protect against acute myeloid leukemia (AML) relapse through missing self recognition of donor HLA C allele groups C1 or C2 and/or Bw4 epitope. These studies were subsequently extended by trials investigating the antileukemia effects of adoptively transferred haplotype mismatched NK cells in non transplant settings. Other mechanisms have been found to induce clinically relevant NK cell alloreactivity in transplantation, e.g. post reconstitution functional reversal of anergic NK cells. More recently, activating KIR came into the spotlight for their potential ability to directly activate donor NK cells through in vivo recognition of HLA or other ligands. Novel therapeutic monoclonal antibodies (mAb) may optimize NK mediated effects. Examples include obinutuzumab (GA101), a glyco engineered anti CD20 mAb with increased affinity for the Fc γ RIIIa receptor, enhancing antibody dependent cellular cytotoxicity (ADCC); lirilumab (IPH2102), a first in class NK specific checkpoint inhibitor blocking the interaction between the major KIR and cognate HLA C antigens; and elotuzumab (HuLuc63), a humanized monoclonal antibody specific for SLAMF7 whose anti myeloma therapeutic effects are partly due to direct activation of SLAMF7 expressing NK cells. In addition to conventional antibodies, NK cell targeted bispecific BiKEs and trispecific TriKEs (killer engagers) have also been developed. These proteins elicit potent effector functions by binding target ligands, e.g. CD19, CD22, CD30, CD133, HLA class II, EGFR, on one arm and NK receptors on the other. An additional innovative approach to direct NK cell activity is genetic reprogramming with chimeric antigen receptors (CAR). To date, primary NK cells and the NK92 cell line have been engineered with CAR specific for antigens expressed on multiple tumors. Encouraging preclinical results warrant further development of this approach. This Research Topic welcomes contributions addressing mechanisms of NK mediated activation in response to disease as well as past and contemporary

strategies to enhance NK mediated reactivity through control of the interactions between NK receptors and their ligands

Gene Therapy in Neurological Disorders Mingjie Li,B. Joy Snider,2018-05-25 Gene therapy has tremendous potential for the treatment of neurological disorders There has been substantial progress in the development of gene therapy strategies for neurological disorders over the last two decades *Gene Therapy in Neurological Disorders* thoroughly reviews currently available gene therapy tools and presents examples of their application in a variety of neurological diseases The book begins with general reviews of gene therapy strategies with a focus on neurological disorders The remainder of the chapters present approaches to specific neurological disorders Each chapter gives an in depth introduction to the relevant field before diving into the specific tool or application The book aims to help investigators students and research staff better understand the principles of gene therapy and its application in the nervous system Provides background information and experimental details of gene therapy tools applied for neuroscience research and neurological disorders Covers a broad range of gene delivery and regulation tools therapeutic agents and target cells including emerging new technologies such as CRISPR Cas9 genome editing Discusses applications of gene therapy tools to neurological disorders including neurodegeneration muscular dystrophy trauma and chronic pain and neoplastic diseases *Document Delivery World* ,1985 **Natural Killer Cells in Tissue Compartments** Massimo Vitale,Simona Sivori,Michael A. techniques for maximizing the effect of caregivers Edited and authored by premier researchers from around the world Gliomas is a comprehensive reference for clinicians and researchers seeking the most up to date information on gliomas and a guide to the best ways to effectively manage glioma patients and their care Synthesizes widely dispersed information on the management of gliomas into one comprehensive resource Chapters written by international authors who are preeminent researchers in the field Fully explores the therapeutic options for patient care from chemotherapy to radiotherapy to personalized approaches

How the Immune System Recognizes Self and Nonself Daisuke Kitamura, 2008-04-08 How do you discriminate yourself from other people This question must sound odd to you since you easily recognize others at a glance and without any effort would not mistake them for yourself However it is not always easy for some people to discriminate themselves from others For example patients with schizophrenia often talk with others living inside themselves Thus it is likely that normally your brain actively recognizes and remembers the information belonging to yourself and discriminates it from the information provided by others although you are not conscious of it This brain function must have been particularly important for most animals to protect their lives from enemies and for species to survive through evolution Similarly higher organisms have also acquired their immune system through evolution that discriminates nonself pathogens and self body to protect their lives from pathogens such as bacteria or viruses The brain system may distinguish integrated images of self and nonself created from many inputs such as vision sound smell and others The immune system recognizes and distinguishes a variety of structural features of self and nonself components The latter actually include almost everything but self for example bacteria viruses toxins pollens chemicals transplanted organs and even tumor cells derived from self tissue To this end the immune system recruits different kinds of immune cells such as B and T lymphocytes natural killer NK cells dendritic cells and macrophages

Human Cytomegalovirus Thomas E. Shenk, Mark F. Stinski, 2008-05-09 The earliest observation of cytomegalovirus CMV interactions with the host cell was owl eye cytopathology in various tissues It was recognized in the early 1970s that human CMV caused in utero infections resulting in congenital brain damage and other sensory neurological complications Events of the 1980s and early 1990s such as the wide application of solid organ and bone marrow transplantation and the emergence of AIDS put the spotlight on human CMV We understood that the virus was an opportunistic agent associated with immunosuppression The golden age of cytomegalovirus research was ushered in during the late 1970s and early 1980s by a set of powerful new technologies that included restriction enzymes DNA cloning DNA sequencing and open reading frame prediction The genetic manipulation and propagation of novel CMV strains was accelerated with the application of bacterial artificial chromosome technology Today we still struggle to understand the full spectrum of disease associated with human CMV To the molecular biologist CMV is a master of regulation in the eukaryotic cell where it either replicates or remains latent To the immunologist CMV is a master of immune evasion with tools to escape both the innate and acquired immune responses The use of animal models with non human CMVs has become significantly

more sophisticated and tied to a more certain understanding of the interrelationships of non human and human CMV genes

Journal of the National Cancer Institute ,2014 *Natural Killer Cells* Michael T. Lotze,Angus W.

Thomson,2009-11-12 *Natural Killer Cells* explains the importance of killer cells and how they are produced It mentions that the most likely explanation for killer cell production is that they serve as a complementary system for T cells as a primary defense against viruses However these cells defend against certain viruses only such as herpes viruses and influenza viruses The book also explains the primary functions of killer cells and it discusses how these cells help recognize damaged tissues limit further damage to tissues and regenerate damaged tissues It discusses how these cells mature and develop and it covers the different isolation culture and propagation methods of these cells Furthermore it focuses on the different killer cells that are present in various parts of the human body The book concludes by explaining that natural killer cells are utilized for clinical therapy of malignancies and that they have led to positive outcomes in the field of biology and medicine Provides a broad detailed coverage of the biology and interactions of NK cells for students fellows scientists and practitioners Includes figures histologic sections and illustrations of the ontogeny of NK cells *United States Civil Aircraft Register* Aeronautical Center (U.S.),1969 **Cancer Immunotherapy** George C. Prendergast,Elizabeth M. Jaffee,2011-04-28 There has been major growth in understanding immune suppression mechanisms and its relationship to cancer progression and therapy This book highlights emerging new principles of immune suppression that drive cancer and it offers radically new ideas about how therapy can be improved by attacking these principles Following work that firmly establishes immune escape as an essential trait of cancer recent studies have now defined specific mechanisms of tumoral immune suppression It also demonstrates how attacking tumors with molecular targeted therapeutics or traditional chemotherapeutic drugs can produce potent anti tumor effects in preclinical models This book provides basic translational and clinical cancer researchers an indispensable overview of immune escape as a critical trait in cancer and how applying specific combinations of immunotherapy and chemotherapy to attack this trait may radically improve the treatment of advanced disease Offers a synthesis of concepts that are useful to cancer immunologists and pharmacologists who tend to work in disparate fields with little cross communication Drs Prendergast and Jaffee are internationally recognized leaders in cancer biology and immunology who have created a unique synthesis of fundamental and applied concepts in this important new area of cancer research Summarizes the latest insights into how immune escape defines an essential trait of cancer Includes numerous illustrations including how molecular targeted therapeutic drugs or traditional chemotherapy can be combined with immunotherapy to improve anti tumor efficacy and how reversing immune suppression by the tumor can cause tumor regression **The English Catalogue of Books ...: 1801-1836.
