**Isolde Ahlgrimm, Vienna and the Early Music Revival** Peter Watchorn, 2017-07-05 Isolde Ahlgrimm 1914 1995 was an important pioneer in the revival of Baroque and Classical keyboard instruments in her native city Vienna and later throughout Europe and the United States She trained as a pianist at the Musikakademie in Vienna under the instruction of Viktor Ebenstein Emil von Sauer and Franz Schmidt In 1934 she met the musical instrument collector Dr Erich Fiala whom she married in 1938 His activities opened up the world of early instruments to her Using a 1790 fortepiano by Michael Rosenberger Isolde Ahlgrimm began her career as a specialist on early keyboard instruments with the first in her notable series of *Concerte für Kenner und Liebhaber* given in Vienna's Palais Palffy in February 1937 Ahlgrimm's career as a harpsichordist also began in 1937 when a new instrument was commissioned from the Ammer brothers in Eisenberg Germany In 1943 Ahlgrimm performed her first all harpsichord programme which consisted of the Goldberg Variations by J S Bach From 1949 to 1956 she devoted herself to performing and recording nearly all of Bach's harpsichord music for the newly founded Dutch label Philips presenting her new approach to the harpsichord to a wider audience Ahlgrimm's performances of Baroque music represented a radical departure from the distinctly twentieth century interpretations by the much more famous Wanda Landowska and her followers Most obviously Ahlgrimm's harpsichord performances eliminated frequent registration changes her instrument had hand stops rather than pedals to change registers and largely eschewed the massive ritardandi and other anachronistic performance practices that were hallmarks of Landowska's essentially Romantic style Ahlgrimm researched and emphasized rhetorical traditions on which the music was based This became more pronounced throughout the course of her later performing writing and teaching career and it was the beginning of an approach to the performance of eighteenth century music

*Sound & Hearing* R. Duncan Luce, 2013-05-13 The major aim of this book is to introduce the ways in which scientists approach and think about a phenomenon hearing that intersects three quite different disciplines the physics of sound sources and the propagation of sound through air and other materials the anatomy and physiology of the transformation of the physical sound into neural activity in the brain and the psychology of the

perception we call hearing Physics biology and psychology each play a role in understanding how and what we hear The text evolved over the past decade in an attempt to convey something about scientific thinking as evidenced in the domain of sounds and their perception to students whose primary focus is not science It does so using a minimum of mathematics high school functions such as linear logarithmic sine and power without compromising scientific integrity A significant enrichment is the availability of a compact disc CD containing over 20 examples of acoustic demonstrations referred to in the book These demonstrations which range from echo effects and filtered noise to categorical speech perception and total more than 45 minutes are invaluable resources for making the text come alive Catalog of Sound Recordings Sibley Music Library,1977
