How Do Plants Use the Energy from the Sun?

Plants make _____ by using energy from _____. The plant transforms _____ (CO_2) from the air and water (H_2O) taken from the ground by roots into _____ ($\text{C}_6\text{H}_{12}\text{O}_6$) and _____ (O_2). This unique process is called **photosynthesis**. The process itself occurs in the _____ of the plant cell. Plants can take in CO_2 through tiny openings called stomata on their leaves. Guard cells on the leaves open and close the stomata.

Cellular _____ is when a plant and animal cell breaks down simple sugars into CO_2 and water. This process releases energy in the form of adenosine triphosphate (ATP). The _____ is used for all processes within a cell that need _____. Think of it as an energy bar for the cell. The process of cellular respiration occurs in the _____.

In science, a chemical reaction is a process in which one or more substances, the reactants, are converted to one or more different substances, which are separated into products. Think of reactants as the ingredients in a recipe, and the product is the meal. Reactants are substances that start the chemical reaction. A product is a substance, but one that is produced at the end of the reaction. The _____ between reactants and products in a chemical reaction can be written as follows:

Key Points

The arrow (\rightarrow) represents the direction in which the reaction occurs. Please note that sometimes, the reaction can occur in the opposite direction.
