This event is exemplary of a trend within the automotive industry: the creation and introduction of company-specific standardised production systems. It gradually emerged with the introduction of the Chrysler Operating System (COS) in the mid 1990s and represents a distinct step in the process towards implementing the universal principles of lean thinking as propagated by the MIT study. For the academic field of industrial sociology and labour policy, the emergence of this trend seems to mark a new stage in the evolution of the debate about production systems in the automotive industry. Jrgens 2002: 2 particularly as it seems to undermine the stand of the critics of the one best way model. Boyer and Freyssenet 1995. The introduction of company-level standardised production systems marks the starting point of the present study. At the core of it is a case study about the Mercedes-Benz Production System (MPS). **A Practical Guide to Logistics** Jerry Rudd, 2019-07-03 Few people come into logistics management with knowledge and experience of all aspects of the profession.
