Pneumatic System

Compressed Air Connections

Compressed air is used to perform the shifting, clutch disengagement and countershaft brake engagement. The compressed air is controlled by solenoid valves. A dedicated air tank mounted to the frame is needed to supply the air for the transmission. Air is supplied to the

transmission via a supply line to the left side of control housing. The tank is pressurized by the engine mounted air compressor and contains a check valve, to prevent air pressure loss if a leak is present in the main air system.
