**International Workshop On Particle Physics And The Early Universe** Leszek Roszkowski,1998-09-22 Deciphering the script for the Big Bang has now become a joint effort of particle physicists and cosmologists The origin and first moments of the early Universe were determined by the same fundamental processes which are studied in terrestrial accelerators and whose traces from the early Universe can be seen in astrophysical observations It is now almost universally accepted that most of the debris left over from the Big Bang is likely to be in the form of particle dark matter Identifying its nature and measuring its abundance in the Universe have become major goals of theorists and experimentalists alike This volume reviews the progress made at the frontiers of research in these rapidly expanding fields A broad range of topics from inflation to primordial black holes to physics at the Planck era and to dark matter and neutrinos both reviews and reports on the most recent advances is presented by leaders in the field
