Before You Level Your Coach

1. Park brake must be set and transmission must be in "park" ("neutral" for diesel coaches) before jacks will operate.
2. Check leveling site to make sure obstructions have been cleared away for proper jack operation.
3. Selecting a site: When the coach is parked on an excessive slope the leveling requirements may exceed the jack lift stroke capability. If the coach is parked on an excessive slope, the coach should be moved to a more level surface before the leveling system is deployed.

CAUTION

- Keep people clear of coach prior to turning the leveling system on and while leveling system is in use.
- Never expose hands or other parts of the body near hydraulic leaks. High-pressure oil leaks may cut and penetrate the skin causing serious injury.
- If your coach is equipped with a slide out(s) always level your unit first, and then operate the slide out room(s). When retracting the slide(s), always retract the room(s) first then retract the leveling jacks. Following this procedure will produce the least amount of stress on your chassis.
- Please read the owners' manual from the manufacturer who built and designed your motor home for further leveling and slide out room operating information and safety features.

WARNING

This is a leveling system only and is not intended to lift your coach's tire or tires completely off the ground. Attempting to lift your coach completely off the ground (for example, to use this leveling system to change a tire) could cause damage to the system and serious injury to the parties involved. If a tire should require changing please have the proper equipment and contact a professional.
