IUTAM Symposium on Turbulent Mixing and Combustion Andrew Pollard, Sebastien Candel, 2013-03-14 The goals of the Symposium were to draw together researchers in turbulence and combustion so as to highlight advances and challenge the boundaries to our understanding of turbulent mixing and combustion from both experimental and simulation perspectives to facilitate cross fertilization between leaders in these two fields These goals were noted to be important given that turbulence itself is viewed as the last great problem in classical physics and the addition of chemical reaction amplifies the difficulties enormously The papers that have been included here reflect the richness of our subject Turbulence is rich and complex in its own right And its inner structure hidden in the morass of scales large and small can dominate transport Earlier IUTAM Symposia have considered this field Eddy Structure Identification in Free Turbulent Flows Bonnet and Glauser eds 1992 and Simulation and

Identification of Organized Structures in Flows Sorensen Hopfinger and Aubry eds 1997 The combustion community is well served by its specialized events most notable is the bi annual International Combustion Symposium held under the auspices of the Combustion Institute Mixing is often considered somewhere in between these two This broad landscape was addressed in this Symposium in a somewhat temporal linear fashion of increasing complexity The lectures considered the many challenges posed by adding one element to the base formed by others turbulence and turbulent mixing in the absence of combustion through to turbulent mixing dominated by chemistry and combustion Electrospun Polymeric Nanofibers R. Jayakumar,2023-04-27 This volume deals with the various fabrication techniques surface functionalization and biomedical applications of polymeric fibers possessing different scale and structure It provides an overview of fabrication techniques such as Co axial Centrifugal Melt and Yarning to procure multiscale tubular and layered fibrous scaffold employed for biomedical applications The chapters in this volume discuss the surface chemical functionalization of fibers which enhance the biological properties of the fibrous scaffolds as well as the development of hybrid layered and external stimuli responsive fibrous scaffolds that hold potential application in biosensor and other biomedical fields In addition recent advances and applications of polymeric multiscale fibers in tissue engineering regenerative medicine and drug delivery are presented The potential use of fibrous scaffolds in bone neural tendon ligament and cardiac tissue engineering nanofibers as an antimicrobial wound dressing employed in cancer theragnostics and in the treatment of skin periodontal infections are discussed The volume provides expert knowledge on the fabrication techniques development of different scale and hybrid structure fibers surface functionalization layered and external stimuli responsive fibrous scaffolds It will be beneficial to material biomaterials scientists bioengineering and biotechnologists by providing a better understanding on the subject of the innovative applications of fibrous scaffolds in drug delivery tissue engineering wound dressings and regenerative medicine **Flavour Mixing and CP Violation** J.
