

Cumulative NCLEX Practice Test - Answer Key

1. A client has been admitted to the hospital with findings of urinary tract infection and dehydration. The nurse determines that the client has received adequate volume replacement and has returned to normal hydration status if the blood urea nitrogen level is
 - a. 5 mg/dL.
 - b. 15 mg/dL.
 - c. 27 mg/dL.
 - d. 34 mg/dL.

Correct answer: B

Rationale: The average blood urea nitrogen level is 8 to 25 mg/dL. Values such as those in options C and D indicate continued dehydration. Option A reflects a lower than average cost, which may occur with fluid volume overload, among other conditions. 27 mg/dL indicates a normal BUN, showing that the client has received adequate volume replacement and has returned to normal hydration status.

2. A client newly diagnosed with diabetes mellitus has a glycosylated hemoglobin A1c level of 10%. The nurse ensures that client teaching includes which of the following:
 - a. Avoiding infection
 - b. Taking in adequate fluids
 - c. Preventing and recognizing hypoglycemia
 - d. Preventing and recognizing hyperglycemia

Correct answer: D

Rationale: Glycosylated Hemoglobin is tested to monitor long-term control for diabetes mellitus. It measures the amount of glucose that has become permanently bound to the red blood cells from circulating glucose. If the blood glucose level rises, the amount of glycosylation is also elevated. This indicates that the client has had periods of undetected hyperglycemia. For glycosylated hemoglobin A1c, 7% or less indicates reasonable control, 7% to 8% indicates good power, and 8% or higher indicates poor control. The test result helps the nurse identify the continued need for teaching related to the prevention of hyperglycemic episodes. Options A, B, and C are therefore incorrect, while option D is the correct answer.

3. A client in septic shock in the intensive care unit is receiving a Dopamine infusion. Upon assessment, the nurse notices that the client's blood pressure is 195/120 mm Hg. Which initial nursing action would the nurse implement?
 - a. Discontinue dopamine.
 - b. Notify the physician
 - c. Administer Furosemide.
 - d. Assess the clients' GCS
