 N. Nikogosyan,2013-11-11 Since the invention of the first laser 30 years ago the frequency conversion of laser radiation in  
 nonlinear optical crystals has become an important technique widely used in quantum electronics and laser physics for  
 solving various scientific and engineering problems The fundamental physics of three wave light interactions in nonlinear  
 optical crystals is now largely understood This has enabled the production of the various harmonic generators sum and  
 difference frequency generators and parametric oscillators based on nonlinear crystals that are now commercially available  
 At the same time scientists continue an active search for novel high efficiency optical materials Therefore in our opinion  
 there is a great need for a handbook of nonlinear optical crystals intended for specialists and practitioners with an  
 engineering background This book contains a complete description of the properties and applications of all nonlinear crystals  
 reported in the literature up to the beginning of 1990 In addition it contains the most important equations for calculating the  
 main parameters such as phase matching direction effective non linearity and conversion efficiency of nonlinear frequency
