simulators were introduced that made all these analyses easy and fast One is Power System Simulator for Engineers PSS E which helps in system studies and gives responses quite real But yet running different analyses for the purpose of routine check of large power systems can take many hours and it needs expertise in the software as well So there is a need of much more simpler method to perform all these analysis Luckily PSS E provides one such method It involves developing some module routine for every analysis through Python or Fortran *A Node-oriented Solution Strategy in Power System Analysis*
