**Radio Techniques for Probing the Terrestrial Ionosphere** Robert D. Hunsucker, 2013-03-07 In the years since the pioneering efforts of Sir Edward Appleton M A F Barnett G Breit and M A Thve many radio techniques have been employed to investigate the terrestrial ionosphere The purposes of this book are to examine the basic physical interaction process of radio waves with the ionosphere scrutinize each of the radio techniques currently in use and describe the elements of each technique as well as assess their capabilities and limitations I have included some of the history of each technique since we often tend to forget the efforts of the pioneers The interaction of radio waves with the terrestrial ionosphere has been described in considerable detail in several classic treatments e g Ratcliffe 1959 Alpert 1963 Budden 1961 and Davies 1965 Rishbeth and e g Flock 1979 Davies Garriott 1969 and in other more recent books 1990 Hargreaves 1979 and Budden 1985 A few of the radio techniques have been described by Hargreaves 1979 and a book by Giraud and Petit 1978 has also included discussion of several of the techniques The WITS handbook No 2 1989 also contains description of several radio techniques

*Progress in Nuclear Energy* M. M. R. Williams, R. Sher, 2013-10-22 Progress in Nuclear Energy Volume 5 covers the significant advances in several aspects of nuclear energy field This book is composed six chapters that describe the progress in nuclear and gas cooled reactors The

introductory chapter deals with the development and evolution of decay heat estimates and decay heat Standards and illustrates the use of these estimates through comparison of both the actinide and fission product decay heat levels from typical fuel samples in a variety of reactor systems The succeeding chapters present different practical methods for handling resonance absorption problem in the case of thermal reactor lattices and review the physics of the different noise phenomena These topics are followed by discussions of the developed methodology for the description of breeding conversion long term fuel logistics and related subjects derived from the detailed mathematical description of the fuel cycle The concluding chapters consider the historical development of heat transfer surfaces for gas cooled reactors These chapters also provide a complete set of differential nuclear data on the three technologically important americium isotopes  $^{241}\text{Am}$   $^{242}\text{Am}$  and  $^{243}\text{Am}$  suitable for incorporation into the computer based U K Nuclear Data Library This book will prove useful to nuclear physicists and nuclear energy scientists and researchers

**Fisheries Management of Mexican and Central American Estuaries** Felipe Amezcua, Brian Bellgraph, 2014-08-13 The tropical estuarine systems of Mexico and Central America are an important part of the region's coastlines for example Mexico alone possesses more than 770 thousand hectares of mangroves as well as the largest estuarine mangrove complex on the American Pacific Marismas Nacionales yet is one of the poorest studied areas in the world This is the first book that deals extensively with fisheries management issues in this region from physical chemistry ecological and socioeconomic views providing an understanding on the function and the effects of human activities on these areas with works undertaken by local scientist

**Turbulent Flows** Jean Piquet, 2013-04-17 obtained are still severely limited to low Reynolds numbers about only one decade better than direct numerical simulations and the interpretation of such calculations for complex curved geometries is still unclear It is evident that a lot of work and a very significant increase in available computing power is required before such methods can be adopted in daily's engineering

practice I hope to report on all these topics in a near future The book is divided into six chapters each chapter in subchapters sections and subsections The first part is introduced by Chapter 1 which summarizes the equations of fluid mechanics it is developed in Chapters 2 to 4 devoted to the construction of turbulence models What has been called engineering methods is considered in Chapter 2 where the Reynolds averaged equations are established and the closure problem studied 1 3 A first detailed study of homogeneous turbulent flows follows 4 It includes a review of available experimental data and their modeling The eddy viscosity concept is analyzed in 5 with the resulting scalar transport equation models such as the famous K $\epsilon$  model Reynolds stress models Chapter 4 requires a preliminary consideration of two point turbulence concepts which are developed in Chapter 3 devoted to homogeneous turbulence We review the two point moments of velocity fields and their spectral transforms 1 their general dynamics 2 with the particular case of homogeneous isotropic turbulence 3 where the so called Kolmogorov's assumptions are discussed at length
