laughing to scorn the daring thinker who ventured to express his interest or belief in this great scientific phenomena But how different to day On all hands we hear of the wonders of Thought Transference or Telepathy as it is called Scientific men write and teach of its fascinating manifestations and even the general public has heard much of the new science and believes more or less in it according to the degree of intelligence and knowledge concerning the subject possessed by the individual Listen to these words from the lips of some of the greatest scientists of the day Prof William James the eminent instructor at Harvard University says When from our present advanced standpoint we look back upon the past stages of human thought whether it be scientific thought or theological thought we are amazed that a universe which appears to us of so vast and mysterious a complication should ever have seemed to anyone so little and plain a thing Whether it be Descartes world or Newton s whether it be that of the Materialists of the last century or that of the Bridgewater treatises of our own it is always the same to us incredibly perspectiveless and short Even Lyell s Faraday s Mill s and Darwin s consciousness of their respective subjects are already beginning to put on an infantile and innocent look These remarks are doubly significant by reason of their having been made by Prof James as the president of the Society for Psychical Research The eminent English scientist Sir William Crookes in his address as president of the Royal Society at Bristol England a few years ago said Were I now introducing for the first time these inquiries to the world of science I should choose a starting point different from that of old where we formerly began It would be well to begin with telepathy with the fundamental law as I believe it to be that thoughts and images may be transferred from one mind to another without the agency of the recognized organs of sense that knowledge may enter the human mind without being communicated in any hitherto known or recognized ways Although the inquiry has elicited important facts with reference to the mind it has not yet reached the scientific stage of certainty which would enable it to be usefully brought before one of our sections I will therefore confine myself to pointing out the direction in which scientific investigation can legitimately advance If telepathy take place we have two physical facts the physical change in the brain of A the suggestor and the analogous physical change in the brain of B the recipient of the suggestion Between these two physical events there must exist a train of physical causes Whenever the connecting sequence of intermediate causes begins to be revealed the inquiry will then come within the range of one of the sections of the British Association Such a sequence can only occur through an intervening medium All the phenomena of the Universe are presumably in some way continuous and it is unscientific to call in the aid of mysterious agencies when with every fresh advance in knowledge it is shown that ether vibrations have powers and attributes abundantly equal to any demand even the transmission of thought
