The text then examines rational expressions, quadratic equations and rational expressions, and roots. Topics include completing the square, quadratic formula, multiplication and division of radical expressions, equations with radicals, basic properties, and reducing to lowest terms, and addition and subtraction of rational expressions. The book takes a look at logarithms, relations, and functions, conic sections, and systems of linear equations, including introduction to determinants, systems of linear equations in three variables, ellipses, and hyperbolas, nonlinear systems, function notation, inverse of a function, and exponential equations and change of base.
