**Resources in education**, 1991 *Earth Resources*, 1978 **Data Science in Agriculture and Natural Resource Management** G. P. Obi Reddy, Mehul S. Raval, J. Adinarayana, Sanjay Chaudhary, 2021-10-11

This book aims to address emerging challenges in the field of agriculture and natural resource management using the principles and applications of data science DS The book is organized in three sections and it has fourteen chapters dealing with specialized areas The chapters are written by experts sharing their experiences very lucidly through case studies suitable illustrations and tables The contents have been designed to fulfil the needs of geospatial data science agricultural natural resources and environmental sciences of traditional universities agricultural universities technological universities research institutes and academic colleges worldwide It will help the planners policymakers and extension scientists in planning and sustainable management of agriculture and natural resources The authors believe that with its uniqueness the book is one of the important efforts in the contemporary cyber physical systems Telemedicine in Low-Resource Settings Richard Wootton, 2015-04-24 Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved over the last decade or so in a largely autonomous way Communication between them has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information A recent review identified seven telemedicine networks each of which had been in operation for at least five years and which provided store and forward telemedicine services to doctors in low and middle income countries These networks provide clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment and retention in rural areas are also of interest Finally there is little published information about the performance of these telemedicine networks and methods for measuring it about how best to manage them and about how to share resources between them A collection of articles reporting the current evidence supporting the use of telemedicine in resource limited settings would build the evidence base and should provide a focus for future research It would also serve to raise the profile of this potentially important research field

## **Image Based Computing for Food and Health Analytics: Requirements, Challenges, Solutions and Practices**

Rajeev Tiwari, Deepika Koundal, Shuchi Upadhyay, 2023-03-25

Increase in consumer awareness of nutritional habits has placed automatic food analysis in the spotlight in recent years. However, food logging is cumbersome and requires sufficient knowledge of the food item consumed. Additionally, keeping track of every meal can become a tedious task. Accurately documenting dietary caloric intake is crucial to manage weight loss but also presents challenges because most of the current methods for dietary assessment must rely on memory to recall foods eaten. Food understanding from digital media has become a challenge with important applications in many different domains. Substantial research has demonstrated that digital imaging accurately estimates dietary intake in many environments and it has many advantages over other methods. However, how to derive the food information effectively and efficiently remains a challenging and open research problem. The provided recommendations could be based on calorie counting, healthy food, and specific nutritional composition. In addition, if we also consider a system able to log the food consumed by every individual along time, it could provide health-related recommendations in the long term. Computer Vision specialists have developed new methods for automatic food intake monitoring and food logging. Fourth Industrial Revolution 4.0 IR technologies such as deep learning and computer vision robotics are key for sustainable food understanding. The need for AI-based technologies that allow tracking of physical activities and nutrition habits are rapidly increasing, and automatic analysis of food images plays an important role. Computer vision and image processing offers truly impressive advances to various applications like food analytics and healthcare analytics and can aid patients in keeping track of their calorie count easily by automating the calorie counting process. It can inform the user about the number of calories, proteins, carbohydrates, and other nutrients provided by each meal. The information is provided in real time and thus proves to be an efficient method of nutrition tracking and can be shared with the dietician over the internet, reducing healthcare costs. This is possible by a system made up of IoT sensors, Cloud/Fog-based servers, and mobile applications. These systems can generate data or images which can be analyzed using machine learning algorithms. Image Based Computing for Food and Health Analytics covers the current status of food image analysis and presents computer vision and image processing-based solutions to enhance and improve the accuracy of current measurements of dietary intake. Many solutions are presented to improve the accuracy of assessment by analyzing health images, data, and food industry-based images captured by mobile devices. Key technique innovations based on Artificial Intelligence and deep learning-based food image recognition algorithms are also discussed. This book examines the usage of 4.0 industrial revolution technologies such as computer vision and artificial intelligence in the field of healthcare and food industry, providing a comprehensive understanding of computer vision and intelligence methodologies which tackles the main challenges of food and health processing. Additionally, the text focuses on the employing sustainable 4.0 IR technologies through which consumers can attain the necessary diet and nutrients and can actively monitor their health. In focusing

specifically on the food industry and healthcare analytics it serves as a single source for multidisciplinary information involving AI and vision techniques in the food and health sector Current advances such as Industry 4.0 and Fog Cloud based solutions are covered in full offering readers a fully rounded view of these rapidly advancing health and food analysis systems
