

Did you know?

Food is processed in your body in four phases: **ingestion** (taking the food in the mouth) **digestion**, **absorption** (entrance of digested food in the blood) and **elimination** (excretion of wastes). Whether it is a fast food burger or a home-cooked meal, all the food you eat is treated to the same processes in the human body.

Your stomach "Speaks": Your body sends you signals when it is time to eat. Many people feel tired, weak or even grouchy when they are hungry. In fact your body needs energy for different processes.

The parts of body that take part in the process of digestion form the **digestive system**.

Where and How Digestion Occurs

The process of digestion occurs in a long, muscular and coiled tube called **alimentary canal**. It starts from the **mouth** and ends at the **anus**.

Parts of Alimentary Canal

Alimentary canal in your body has the following parts plus a few glands that help in digestion:

1. Mouth
2. Esophagus
3. Stomach
4. Small intestine
5. Large intestine
6. Glands that help in digestion
 - i. Liver
 - ii. Pancreas

1. The Start of the Process –the Mouth

The process of digestion begins in your mouth. Your mouth is provided with lips, tongue, teeth and salivary glands. Your tongue and teeth break food into small pieces. Your teeth are there for cutting, grinding, tearing and crushing of the food. Are your all teeth the same?

Your tongue moves food around and mixes it with a watery substance called **saliva**. Saliva is produced by salivary glands. It contains an enzyme, **amylase** (ptyalin). Amylase starts the chemical breakdown of starch (carbohydrates) to sugar. After some time the food in the mouth becomes a soft mass called **bolus**. The bolus is then moved to the back of your mouth called **pharynx**. The pharynx leads food to the esophagus.
