In recent times real time computer systems have become increasingly complex and sophisticated. It has now become apparent that to implement such schemes effectively professional rigorous software methods must be used. This includes analysis, design and implementation. Unfortunately few textbooks cover this area well. Frequently they are hardware oriented with limited coverage of software or software texts which ignore the issues of real time systems. This book aims to fill that gap by describing the total software design and is given development process for real time systems. Further special emphasis of microprocessor based real time embedded systems to the needs. WHAT ARE REAL TIME COMPUTER SYSTEMS? Real time systems are those which must produce correct responses within a definite time limit. Should computer responses exceed these time bounds then performance degradation and or malfunction results. WHAT ARE REAL TIME EMBEDDED COMPUTER SYSTEMS? Here the computer is merely one functional element within a real time system; it is not a computing machine in its own right. WHO SHOULD READ THIS BOOK? Those involved or who intend to get involved in the design of software for real time systems. It is written with both software and hardware engineers in mind being suitable for students and professional engineers. **Software Engineering Education** Rosalind L.
