*The Materiality of Writing* Christian Mosbæk Johannessen, Theo van Leeuwen, 2017-09-18 This book examines the materiality of writing. It adopts a multimodal approach to argue that writing as we know it is only a small part of the myriad gestures we make, practices we engage in, and media we use in the process of trace making. Taking a broad view of the act of writing, the volume features contributions from both established and up and coming scholars from around the world and incorporates a range of methodological and theoretical perspectives from fields such as linguistics, philosophy, psychology of perception, design, and semiotics. This interdisciplinary framework allows readers to see the relationships between writing and other forms of trace making, including architectural drawings, graphic shapes, and commercial logos, and between writing and reading, with a number of illustrations highlighting the visual data used in the forms and studies discussed. The book also looks forward to the future, discussing digital media and new technology and their implications for trace making. This pioneering volume will be of interest to scholars and researchers in multimodality, literacy, cognitive neuroscience, design theory, discourse analysis, and applied linguistics.

**Farmsteads and Funerary Sites: The M1 Junction 12 Improvements and the A5-M1 Link Road, Central Bedfordshire** Jim Brown, 2020-01-31 Extensive excavations by MOLA Museum of London Archaeology near Houghton Regis and Toddington in south Central Bedfordshire provide a detailed multi-period dataset for regional and national comparison. Evidence ranges from middle late Bronze Age pits to medieval settlements.

**Quantification of Sustainability Indicators in the Food Sector** Subramanian Senthilkannan Muthu, 2018-08-29 This book highlights various methods of quantifying sustainability indicators in the food sector, highlighting the environmental indicators in the meat chain and agri-food wastes from a bio-refinery perspective. Numerous sustainability indicators that encompass all three pillars: economic, environmental, and social areas, as well as individual and joint indicators, e.g., environmental and social, have been developed and quantified to date. Some of these indicators can be utilised for any industrial sector, while others are sector-specific. Behind each indicator developed, there is a unique scientific model, method, or assessment technique. This book enumerates these indicators, providing details such as the concept, development methodology, assessment technique, and applications, mainly in the food industry.

**Multisensory Softness** Massimiliano Di Luca, 2014-07-23 Offers a unique multidisciplinary overview of how humans interact with soft objects and how multiple sensory signals are used to perceive material properties, with an emphasis on object deformability. The authors describe a range of setups that have been employed to study and exploit sensory signals involved in interactions with compliant objects, as well as techniques to simulate and modulate softness, including a psychophysical perspective of the field. Multisensory Softness focuses on the cognitive mechanisms underlying the use of multiple sources of information in softness perception. Divided into three sections, the first, Perceptual Softness, deals with the sensory components and computational requirements of softness perception; the second, Sensorimotor Softness, looks at the

motor components of the interaction with soft objects and the final part Artificial Softness focuses on the identification of exploitable guidelines to help replicate softness in artificial environments
