Proceedings of the 15th European Conference on e Learning ECEL 2016 Credibility, Validity, and Assumptions in Program Evaluation Methodology Apollo M. Nkwake, 2023-12-13 This book focuses on methods of choice in program evaluation Credible methods choice lies in the assumptions we make about the appropriateness and validity of selected methods and the validity of those assumptions As evaluators make methodological decisions in various stages of the evaluation process a number of validity questions arise Yet unexamined assumptions are a risk to useful evaluation The first edition of this book discussed the formulation of credible methodological arguments and methods of examining validity assumptions However previous publications suggest advantages and disadvantages of using various methods and when to use them Instead this book analyzes assumptions underlying actual methodological choices in evaluation studies and how these influence evaluation quality This analysis is the basis of suggested tools The second edition extends the review of methodological assumptions to the evaluation of humanitarian assistance While evaluators of humanitarian action apply conventional research methods and standards they have to adapt these methods to the challenges and constraints of crisis contexts For example the urgency and chaos of humanitarian emergencies makes it hard to obtain program documentation objectives may be unclear and early plans may quickly become outdated as the context changes or is clarified The lack of up to date baseline data is not uncommon Neither is staff turnover Differences in perspective may intensify and undermine trust The deviation from ideal circumstances challenges evaluation and calls for methodological innovation And how do evaluators work with assumptions in non ideal settings What tools are most relevant and effective This revised edition reviews major evaluations of humanitarian action and discusses strategies for working with evaluation assumptions in crises and stable program settings

The Search For Dale's Plane Fran Phillips,2015-01-05 The Search for Dale s Plane is a true storythat began on December 1 2013 when Alaska bush pilot

Dellon Smith set out to find his brother's plane after it dropped off the radar over remote Idaho. Aided by family members from seven states and his brother's church congregation, they encountered impossible weather conditions, impenetrably steep mountains, and the complete loss of clues. Going home for Christmas, they returned with a new perspective and resources. With bleary eyes, physical exhaustion, humility, and prayers, thousands volunteered, and miracles happened. The search wasn't just about finding the plane; as many discovered a richer, more fulfilling life. Sharing their feelings and experiences, this book promises to uplift and leave you warmed by the love our Heavenly Father shows during periods of adversity, and by the faith, dignity, and courage exhibited by Janis, the wife of the pilot, and other family members as they waited in limbo with hope in their hearts.

The Application of Formal Methods Simon Foster, Augusto Sampaio, 2024-08-31. This Festschrift dedicated to Jim Woodcock contains papers written by many of his closest collaborators. After a PhD on software verification at the University of Liverpool, Jim has combined a successful career in academia with outstanding industry research. In particular, he has been a pioneer in applying mathematical modelling approaches in critical industries. At GEC's Hirst Research Centre, he worked on a novel distributed telephone exchange and a service specification of a PABX exchange. In Oxford, he collaborated with IBM Hursley Laboratories on modelling of the CICS transaction processing system, one of the most significant software systems ever. As part of the UK government's cybersecurity strategy, he used Z techniques to develop secure office automation systems and a secure version of UNIX. He worked with the Smith Institute and BR Research to verify the safety of railway signalling systems, approaches developed further in safety-critical control systems for the UK Nuclear Installation Inspectorate and British Energy. He provided a technically complete theory of correctness for Z, verifying its soundness from first principles and completed the verification of Mondex, a smartcard-based electronic cash system, the first application of a general theory of program correctness to an industrial product. He coordinated the experimental work of the Verified Software Initiative, an international grand challenge. More recently, he extended the collection of standard Unifying Theories of Programming (UTP) with work on object orientation and hybrid systems. Currently, he is working on a UTP theory of

probabilistic programs with application to robotics Jim has been a lecturer research fellow reader and professor at the University of Surrey the University of Oxford the University of Kent and since 2004 the University of York and he is a visiting professor at the Federal University of Pernambuco and Trinity College Dublin He is a Fellow of the Royal Academy of Engineering the British Computer Society and the Formal Methods Europe association and he was part of the team that won the Queen s Award for Technological Achievement in 1992 He is the Editor in Chief of the ACM journal Formal Aspects of Computing he has chaired major related academic conferences and he has contributed to CCITT and Z ISO international standards Throughout all these activities Jim has been a guide and inspiration to colleagues and students and collaborated successfully with researchers in the UK Brazil China France USA Ireland and Singapore Many of these researchers show in their contributions to this volume the ongoing impact of his work
