**Transparency in Assessment - Exploring the Influence of Explicit Assessment Criteria** Anders Jönsson,Frans Prins,2019-04-03 In many schools and higher education institutions it has become common practice to share assessment criteria with students Sometimes it is required for accountability purposes at other times

criteria are used as a means to communicate expectations to students. However, the idea that explicit assessment criteria should be shared with students has been contested. On the one hand, research has shown that explicit criteria may positively affect student performance, reduce their anxiety, as well as support students' use of self-regulated learning strategies. On the other hand, there are fears that explicit criteria may have a restraining influence on students' learning, as well as limiting their autonomy and creativity. There are also indications of students becoming more performance-oriented as opposed to learning-oriented when being provided with explicit assessment criteria. Taken together, it is not fully understood under which circumstances it is productive for student learning to share explicit assessment criteria and under which circumstances it is not. In particular, empirical research on the proposed negative effects of sharing criteria with learners is limited, and most fears voiced in the literature are based on individual experiences and anecdotal evidence. In this book, we therefore bring different perspectives on transparency in assessment together in order to further our understanding of how students are influenced by the use of explicit assessment criteria. A deeper understanding of the influence of explicit assessment criteria on students' understanding of criteria, motivation, and learning is equally imperative for future research and educational practice, both of which need to go beyond individual opinions and convictions.

Ornaments, Rubrics, &c. A letter, etc Gilbert Elliot, 1874 *Inference and Consciousness* Timothy Chan, Anders Nes, 2019-12-20 Inference has long been a central concern in epistemology as an essential means by which we extend our knowledge and test our beliefs Inference is also a key notion in influential psychological accounts of mental capacities ranging from problem solving to perception Consciousness on the other hand has arguably been the defining interest of philosophy of mind over recent decades Comparatively little attention however has been devoted to the significance of consciousness for the proper understanding of the nature and role of inference It is commonly suggested that inference may be either conscious or unconscious Yet how unified are these various supposed instances of inference Does either enjoy explanatory priority in relation to the other In what way or ways can an inference be conscious or fail to be conscious and how does this matter This book brings together original essays from established scholars and emerging theorists that showcase how several current debates in epistemology philosophy of psychology and philosophy of mind can benefit from more reflections on these and related questions about the significance of consciousness for inference
