A Guide to Econometrics Peter Kennedy, 2003 A popular intuitively based overview of econometrics *Using Econometrics* A. H. Studenmund, 2001 This text covers single equation linear regression analysis in a format that emphasizes real world examples and exercises *Introductory Econometrics* Humberto Barreto, Frank Howland, 2006 This highly accessible and innovative text with supporting web site uses Excel R to teach the core concepts of econometrics without advanced mathematics It enables students to use Monte Carlo simulations in order to understand the data generating process and sampling distribution Intelligent repetition of concrete examples effectively conveys the properties of the ordinary least squares OLS estimator and the nature of heteroskedasticity and autocorrelation Coverage includes omitted variables binary response models basic time series and simultaneous equations The authors teach students how to construct their own real world data sets drawn from the internet which they can analyze with Excel R or with other econometric software The accompanying web site with text support can be found at www.wabash.edu/econometrics Econometrics, 2nd Rev. Ed Badi Hani Baltagi, 1998 This reference introduces the basic econometric methods and the underlying assumptions behind them It also includes a simple and concise treatment of more advanced topics in time series spatial correlation limited dependent variables and panel data models as well as specification testing Gauss Newton regressions and regression diagnostics The strengths of this book lie in presenting difficult material in a simple yet rigorous manner In addition the book features a set of empirical illustrations that demonstrate some of the basic results The empirical exercises are solved using several econometric software packages **A Concise Introduction to Econometrics** Philip Hans Franses, 2002-12-12 In this short and very practical 2002 introduction to econometrics Philip Hans Franses guides the reader through the essential concepts of econometrics Central to the book are practical questions in various economic disciplines which can be answered using econometric methods and models The book focuses on a limited number of the essential most widely used methods before going on to review the basics of econometrics The book ends with a number of case studies drawn from recent empirical work to provide an intuitive illustration of what econometricians do when faced with practical questions Throughout the book Franses emphasises the importance of specification evaluation and implementation of models appropriate to the data Assuming basic familiarity only with matrix algebra and calculus the book is designed to appeal as either a short stand alone introduction for students embarking on an empirical research project or as a supplement to any standard introductory textbook **Reproducible Econometrics Using R** Jeffrey Scott Racine, 2019 Linear time series methods Introduction to linear time series models Random walks unit roots and spurious relationships Univariate linear time series models Robust parametric inference Robust parametric estimation Model uncertainty Advance Bibliography Author index Subject index *Using Econometrics* Henry J.
