Proceedings of the EAA Joint Symposium on Auralization and Ambisonics 2014 Weinzierl, Stefan , Vorländer, Michael , Zotter, Franz, Maempel, Hans-Joachim , Lindau, Alexander ,2014 In consideration of the remarkable intensity of research in the field of Virtual Acoustics including different areas such as sound field analysis and synthesis spatial audio technologies and room acoustical modeling and auralization it seemed about time to organize a second international symposium following the model of the first EAA Auralization Symposium initiated in 2009 by the acoustics group of the former Helsinki University of Technology now

Aalto University Additionally research communities which are focused on different approaches to sound field synthesis such as Ambisonics or Wave Field Synthesis have in the meantime moved closer together by using increasingly consistent theoretical frameworks Finally the quality of virtual acoustic environments is often considered as a result of all processing stages mentioned above increasing the need for discussions on consistent strategies for evaluation Thus it seemed appropriate to integrate two of the most relevant communities i e to combine the 2nd International Auralization Symposium with the 5th International Symposium on Ambisonics and Spherical Acoustics The Symposia on Ambisonics initiated in 2009 by the Institute of Electronic Music and Acoustics of the University of Music and Performing Arts in Graz were traditionally dedicated to problems of spherical sound field analysis and re synthesis strategies for the exchange of ambisonics encoded audio material and more than other conferences in this area the artistic application of spatial audio systems This publication contains the official conference proceedings It includes 29 manuscripts which have passed a 3 stage peer review with a board of about 70 international reviewers involved in the process Each contribution has already been published individually with a unique DOI on the DepositOnce digital repository of TU Berlin Some conference contributions have been recommended for resubmission to Acta Acustica united with Acustica to possibly appear in a Special Issue on Virtual Acoustics in late 2014 These are not published in this collection

Building Energy Modeling with OpenStudio Larry Brackney, Andrew Parker, Daniel Macumber, Kyle Benne, 2018-05-15 This textbook teaches the fundamentals of building

energy modeling and analysis using open source example applications built with the US DOE's OpenStudio modeling platform and EnergyPlus simulation engine. Designed by researchers at US National Laboratories to support a new generation of high performance buildings, EnergyPlus and OpenStudio are revolutionizing how building energy modeling is taught in universities and applied by professional architects and engineers around the world. The authors, all researchers at National Renewable Energy Laboratory and members of the OpenStudio software development team, present modeling concepts using open source software that may be generally applied using a variety of software tools commonly used by design professionals. The book also discusses modeling process automation in the context of OpenStudio Measures, small self-contained scripts that can transform energy models and their data to save time and effort. They illustrate key concepts through a sophisticated example problem that evolves in complexity throughout the book. The text also examines advanced topics including daylighting, parametric analysis, uncertainty analysis, design optimization, and model calibration. Building Energy Modeling with OpenStudio teaches students to become sophisticated modelers rather than simply proficient software users. It supports undergraduate and graduate building energy courses in Architecture and in Mechanical, Civil, Architectural, and Sustainability Engineering.
