Software-Hardware Integration in Automotive Product Development John Blyler,2013-11-07 Software Hardware Integration in Automotive Product Development brings together a must read set of technical papers on one the most talked about subjects among industry experts The carefully selected content of this book demonstrates how leading companies universities and organizations have developed methodologies tools and technologies to integrate verify and validate hardware and software systems The automotive industry is no different with the future of its product development lying in the timely integration of these chiefly electronic and mechanical systems The integration activities cross both product type and engineering discipline boundaries to include chip embedded board and network vehicle level systems Integration verification and validation of each of these three domains are examined in depth attesting to the difficulties of this phase of the automotive hardware and software system life cycle The current state of the art is to integrate verify validate and test automotive hardware and software with a complement of physical hardware and virtual software prototyping tools The growth of sophisticated software tools sometimes combined with hardware in the loop devices has allowed the automotive industry to meet shrinking time to market decreasing costs and increasing safety demands It is also why most of the papers in this book focus on virtual systems

prototypes and models to emulate and simulate both hardware and software Further such tools and techniques are the way that hardware and software systems can be co verified and tested in a concurrent fashion The goal of this compilation of expert articles is to reveal the similarities and differences between the integration verification and validation IVV of hardware and software at the chip board and network levels This comparative study will reveal the common IVV thread among the different but ultimately related implementations of hardware and software systems In so doing it supports the larger systems engineering approach for the vertically integrated automobile namely that of model driven development
