Liquid Chromatography J.W. Dolan, L.R. Snyder, 2013-01-08 A general approach to method development based on the concept of quality by design is described The work flow includes problem definition mode selection selectivity optimization system optimization and method validation Computer assisted methods can support some of these decision steps minimizing the time required to build a robust method The approach used is generally applicable but practical illustrations will largely be restricted to isocratic and gradient elution methods in reversed phase liquid chromatography Critical parameters are identified as column selection identification of the mobile phase composition gradient time temperature pH for ionizable compounds and buffer concentration We focus on how to select these variables and their influence on the quality criteria for defining method suitability

When Chemistry Meets Biology - Generating Innovative Concepts, Methods and Tools for Scientific Discovery in the Plant Sciences Erich Kombrink, Markus Kaiser, 2016-08-12 Biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems This is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation or protein degradation In contrast to animal systems which are nurtured from drug research the systematic development of

novel bioactive small molecules as research tools for plant systems is a largely underexplored research area. This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes. In particular, when small molecules are integrated into genetic strategies, thereby defining chemical genetics, they may help to circumvent inherent problems of classical forward genetics. There are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach. These include the unraveling of molecular mechanisms and critical steps in hormone signaling, activation of defense reactions, and dynamic intracellular processes. The intention of this Research Topic of *Frontiers in Plant Physiology* is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges. The research topic covers diverse aspects of plant chemical biology, including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources, which rely on robust and quantitative high throughput bioassays, the critical evaluation and characterization of the compound's activity, selectivity, and ultimately the identification of its protein target(s) and mode of action, which is yet the biggest challenge of all. Such well-characterized selective chemicals are attractive tools for basic research, allowing the functional dissection of plant signaling processes, or for applied purposes, if designed for protection of crop plants from disease. New methods and data mining tools for assessing the bioactivity profile of compounds, exploring the chemical space for structure-function relationships, and comprehensive chemical fingerprinting/metabolomics are also important strategies in plant chemical biology. In addition, there is a continuing need for diverse target-specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments. To achieve these goals and to add suitable probes and methods to the experimental toolbox, plant biologists need to closely cooperate with synthetic chemists. The development of such tailored chemicals that, beyond application in basic research, can modify traits of crop plants or target specific classes of weeds or pests, by collaboration of applied and academic research groups, may provide a bright future for plant chemical biology. The current Research Topic covers the breadth of the field by presenting original research articles, methods papers, reviews, perspectives, and opinions.
