

# Position Latérale de Sécurité, en 5 étapes

## 1<sup>ère</sup> ÉTAPE

Avant de mettre une personne en position latérale de sécurité (PLS), il faut vérifier qu'elle soit inconsciente sur le dos mais qu'elle respire toujours normalement. Des-serrez si vous le pouvez le col, la cravate ou la ceinture. Si elle porte des lunettes, commencez par les lui retirer.

## 2<sup>e</sup> ÉTAPE

Tout d'abord, il faut se positionner à côté (ici à droite) de la personne étendue et vérifier que vous êtes bien stable sur vos deux genoux. Une fois que vous êtes bien installé, prenez, avec votre main gauche, celle du patient. Et appliquez le dos de sa main gauche contre son oreille droite.

## 3<sup>e</sup> ÉTAPE

Ensuite, tout en maintenant la pression contre cette main gauche, relevez, avec votre main droite, la jambe gauche de la personne inconsciente. Puis en appuyant sur son genou gauche, le patient va automatiquement se tourner sur le côté droit grâce à un système de balancier.

## 4<sup>e</sup> ÉTAPE

Après avoir délicatement retiré votre main gauche, de sous la tête de la victime, ajustez sa jambe gauche.

## 5<sup>e</sup> ÉTAPE

Pour éviter que le patient ne perde l'équilibre, le genou gauche doit former un angle droit entre le tibia et la cuisse. Une fois que la personne est en PSL, entrouvrez délicatement sa bouche pour permettre l'écoulement d'éventuels liquides vers l'extérieur et vérifiez régulièrement sa respiration. Enfin, appelez les secours.

#### **MicroRNA Expression Detection Methods**

Zhiguo Wang, Baofeng Yang, 2009-12-23 MicroRNAs miRNAs endogenous noncoding regulatory mRNAs of nucleotides have rapidly emerged as the central players in gene expression regulation Owing to their ever increasing implications in the control of various biological and pathological processes miRNAs have now been considered novel biomarkers of various human diseases including cancer viral disease cardiovascular disorders metabolic disturbances etc Particular expression profiles have been associated with particular pathological states Expression profiling of miRNAs have therefore become extremely important not only for fundamentalists but also for clinicians However the methodologies used for detecting protein coding mRNAs cannot be directly applied to miRNAs because of their small size Over the past years researchers have made great efforts to developing techniques suitable for miRNA detection and quantification a wide spectrum of creative and innovative techniques more than 30 different methods have been invented and validated It has come to the time now to summarize these methods and present them in an orderly manner for better understanding and utilization of these methods to miRNA research and applications In particular the development of methods for quantifying circulating miRNAs opens up a fascinating opportunity for realizing miRNA as diagnostic and prognostic biomarkers of human disease A book on this subject may help boosting up the passion of researchers to further improve the existing techniques and develop more new methods to meet new application needs These considerations prompted us and urged us to undertake the work writing a book focusing on miRNA expression detection methods
