

J908D-10

Fig. 6 Setting Spark Plug Electrode Gap—Typical

J908D-15

Fig. 7 Normal Operation and Cold (Carbon) Fouling for unleaded fuel. During combustion, fuel with MMT coats the entire tip of the spark plug with a rust color deposit. The rust color deposits could be misdiagnosed as being caused by coolant in the combustion chamber. MMT deposits do not affect spark plug performance.

COLD FOULING (CARBON FOULING)

Cold fouling is sometimes referred to as carbon fouling. The deposits that cause cold fouling are basically carbon (Fig. 7). A dry, black deposit on one or two plugs in a set may be caused by sticking valves or defective spark plug cables. Cold (carbon) fouling of the entire set may be caused by a clogged air cleaner.

Cold fouling is normal after short operating periods. The spark plugs do not reach a high enough operating temperature during short operating periods.

WET FOULING

A spark plug that is coated with excessive wet fuel or oil is wet fouled. In older engines, wet fouling can be caused by worn rings or excessive cylinder wear. Break-in fouling of new engines may occur before normal oil control is achieved. In new or recently overhauled engines, wet fouled spark plugs can be usually be cleaned and reinstalled.

OIL OR ASH ENCRUSTED

If one or more plugs are oil or oil ash encrusted, engine oil is entering the combustion chambers (Fig. 8). Evaluate the engine to determine the cause.

PR1673

Fig. 8 Oil or Ash Encrusted

HIGH SPEED MISS

When replacing spark plugs because of a high speed miss condition, wide open throttle operation should be avoided for approximately 80 km (50 miles) after installation of new plugs. This will allow deposit shifting in the combustion chamber to take place gradually and avoid plug destroying splash fouling shortly after the plug change.

ELECTRODE GAP BRIDGING

Loose deposits in the combustion chamber can cause electrode gap bridging. The deposits accumulate on the spark plugs during continuous stop-and-go driving. When the engine is suddenly subjected to a high torque load, the deposits partially liquefy and bridge the gap between the electrodes.
