Methods of IT Project Management, Fourth Edition

Jeffrey L. Brewer, Kevin C. Dittman, 2022-10-15 Designed for graduate, advanced undergraduate, and practitioner project management courses with an information technology focus, Methods of IT Project Management is designed around the Project Management Body of Knowledge (PMBOK) incorporating material from the latest seventh edition while still maintaining the book's process approach. The text provides students with all the concepts, techniques, artifacts, and methods found in the leading project management reference books and modern development methodologies: agile, hybrid, and traditional, while also conveying practical knowledge that can immediately be applied in real-world settings. Unlike other books in this area, the material is organized according to the sequence of a generic project life cycle: from project selection to initiation, planning, execution, control, and iteration, or project closeout. Following this life cycle approach, as opposed to covering the material by knowledge area or project performance domain, allows new learners to simultaneously study project management concepts and methods as they develop skills they can use immediately during and upon completion of the course. The text's structure also allows different programs to use the book during real-world student projects. The Stakeholder Perspective

Massimo Pirozzi, 2019-09-30 The Stakeholder Perspective places people at the center of both projects and project management. It gives to the project management community a helpful, innovative stakeholder-centered approach to increase projects' delivered value and success rate. It presents a logical model, also called the Stakeholder Perspective, which acts as the reference point in a structured path to effectiveness. Starting from the analysis of a project's stakeholders, the model integrates both rational and relational, innovative approaches. Its continuous focus on stakeholder requirements and expectations helps to set a proper path and to maintain it in order to target success and to achieve goals in a variety of projects with different size and complexity. The book presents a set of innovative and immediately applicable techniques for effective stakeholder identification and classification, as well as analysis of stakeholder requirements and expectations, key stakeholders management, stakeholder network management, and more generally stakeholder relationship management. The proposed stakeholder classification model consists of just four communities, each one based on the

commonality of main interests and behavior This model features an accurate and stable identification process to increase effective communication and drastic reduce relationship complexity A systemic approach is proposed to analyze both stakeholder requirements and expectations The approach aids in detecting otherwise unclear stakeholder requirements and or hidden stakeholder expectations An interactive communication model is presented along with its individual and organizational frames of reference Also presented are relevant cues to maximize effective and purposeful communication with key stakeholders as well as with the stakeholder network The importance of satisfying not only the project requirements but also the stakeholder expectations is demonstrated to be the critical success factor in all projects An innovative approach based on the perceived value and key performance indicators shows how to manage different levels of project complexity The book also defines a complete structured path to relationship effectiveness called Relationship Management Project which can be tailored to enhance stakeholder and communication management processes in each one of the project management process groups i e initiating planning executing monitoring and controlling and closing The book concludes with a look ahead at Project Management X 0 and the stakeholder centered evolution of both project and portfolio management
