The scope of *Women's Reproductive Mental Health across the Lifespan* begins long before the childbearing years and continues well after those years have ended. Chapter authors discuss advances in areas such as fertility treatment and contraception and present current thinking on the psychological impact of pregnancy loss, menopause, cancer, and other stressors. These expert contributors emphasize the connections between an individual's biology and psychology and cultural expectations in shaping women's mental health and the balance between a client's unique history and current clinical knowledge. Clinicians need to address disorders included in the coverage: The experience of puberty and emotional wellbeing; Body image issues and eating disorders in the childbearing years; Risk assessment and screening during pregnancy; Normal and pathological postpartum anxiety; Mood disorders and the transition to menopause; The evolution of reproductive psychiatry. A reference with an extended shelf life.
