Foundations of Wisdom: Integrating Philosophical Thought and Educational Vision 2025 1.DR. SANGEETA

SHROFF 2. DR. DIVYA SHARMA 3. DR. GOPA SHARMA 4. SMT. MANJUSHA TIWARI, PREFACE Education has always been more than the transmission of knowledge it is the shaping of minds the cultivation of character and the nurturing of wisdom In today's rapidly changing world where information is abundant yet understanding often fragmented the need to reconnect education with the timeless insights of philosophy has never been greater This book *Foundations of Wisdom Integrating Philosophical Thought and Educational Vision* emerges from that conviction The chapters in this volume are built upon the belief that philosophy is not confined to abstract thought but is a living force that can illuminate the paths of learning teaching and human growth By exploring diverse philosophical traditions and weaving them into contemporary educational practices this book seeks to bridge the gap between reflection and application It offers a vision of education that is holistic ethical and future oriented one that respects both reason and imagination discipline and creativity This work is intended not only for scholars and educators but also for learners policy makers and anyone who wishes to engage in the deeper questions of what it means to learn and to teach The ideas presented here encourage dialogue across disciplines and cultures fostering a sense of shared responsibility in shaping education that uplifts both the individual and society As you turn these pages may you discover that wisdom is not a static inheritance but an evolving foundation one that can guide us in creating educational systems rooted in purpose justice and human dignity Editors Dr Sangeeta Shroff Dr Divya Sharma Dr Gopa Sharma Smt Manjusha Tiwari *Resources in Education* ,1990-03 *Computerworld* ,1985-04-22 For more than 40 years

[Methodological Issues in Consciousness Research, volume II](#)

Axel Cleeremans, 2025-04-16

This Research Topic is the second volume of the Research Topic **Methodological Issues in Consciousness Research** Please see the first volume [here](#)

The simplest and perhaps the first notion of consciousness in the West as a sentience or awareness of internal or external existence was introduced in the Seventeenth century by the English physician Robert Fludd though similar and even more refined notions of consciousness were developed centuries before in Indian philosophy and contemplative wisdom traditions

Because it permeates human existence in so many different ways the study of consciousness is a profoundly interdisciplinary endeavour and engages disciplines such as philosophy including Eastern philosophy cognitive neuroscience anthropology psychiatry and psychopathology and even physics

The study of consciousness may involve domains as diverse as perceptual awareness cognition and metacognition reasoning executive control theory of mind self sleep and dreaming emotional competence and empathy

It concerns both healthy e g aging meditation spiritual experiences and pathological conditions e g epilepsy neglect and locked in syndromes minimally conscious states anesthesia and involves considerations operating at different time scales e g evolution development expertise

Today however and despite almost thirty years of concerted interdisciplinary efforts the nature and mechanisms of consciousness remain as elusive as ever

Theoretically different conceptual frameworks aimed at characterizing both its functional and phenomenal aspects take sometimes radically different assumptions as their starting point but often fail to make sufficiently precise differential predictions to be falsifiable

While most recent views generally

consider methods investigating human higher order reflective or access consciousness the theoretical and experimental foundations of primary proto consciousness often remain vague and ignore evolutionary considerations Influential distinctions such as the distinction between phenomenal and access consciousness between pre reflective minimal and the reflective narrative self between graded and all or none processing or even between conscious and unconscious processing all remain unsettled or controversial The field is also rife with methodological challenges and controversies some of which remain largely unsolved Questions such as how to best measure awareness or to how establish its absence issues such as what kind of neuroscientific data would convincingly make it possible to isolate the neural correlates of consciousness or what types of confounds contaminate extant findings challenges such as how to imagine crucial experiments that are sufficiently sensitive to falsify some theoretical proposals all need to be addressed in open interdisciplinary dialogue This Frontiers Research Topic is aimed at stimulating discussion about current methodological issues and trends in consciousness research We welcome theoretical and empirical contributions as well as empirical articles from both experts and young scientists who work in the field of consciousness research Submissions of related hypotheses original research articles case reports perspectives reviews opinions and commentaries are welcome We very much hope that this Frontiers Research Topic will contribute to enhancing our characterization and understanding of the methodological and conceptual challenges associated with the study of human consciousness

Never Mind the Laptops Bob Johnstone, 2003-08-17 What we all hope for our children s education is undiminished curiosity and creativeness and solid practical preparation for adult work Today there s no doubt that easy access to computers is vital for students Bob Johnstone has brilliantly and passionately told the story of the worldwide struggle to make today s equivalent of the pencil accessible to all students Victor K McElheny author of *Watson and DNA* If every kid had a laptop computer what would difference would it make to their learning And to their prospects Today these are questions that all parents teachers school administrators and politicians must ask themselves Bob Johnstone provides a definitive answer to the conundrum of computers in the classroom His conclusion we owe it to our kids to educate them in the medium of their time In this book he tells the extraordinary story of the world s first laptop school How daring educators at an independent girls school in Melbourne Australia empowered their students by making laptops mandatory And how they solved all the obstacles to laptop learning including teacher training Their example spread to thousands of other schools worldwide Especially in America where it inspired the largest educational technology initiative in US history the State of Maine issuing laptops to every seventh grader in its public school system This lively intriguing anecdote rich account is based on hundreds of interviews In it you ll meet the visionary leaders inspirational principals heroic
