Keep the most ideas through rapidly posed questions.</p> <p>Research and Generate Ideas: Analyze the reasons for the need, want, or problem. Investigate who or what it is that is affected, and consider the need, want, or problem from their perspective. Research any existing solutions, and identify why they are not adequate or appropriate. Listen to clients to solve problems that they have discovered. Perform market research to determine if a want or need exists and generate the development of a design solution.</p> <p>Identify Criteria and Specify Constraints: Identify the end user if the client is not. Redefine the problem to the agreement of both client and engineer. Identify what the solution must do, and the degree to which it will be pursued. Identify the limitations within which the engineer must perform his/her duties. Compile the information into a design brief.</p> <p>Explore Possibilities: Initiate further development of brainstorming ideas with constraints and tradeoffs considered. Explore alternative ideas based on further knowledge and technology.</p> <p>Develop a Design Proposal: Develop detailed and annotated sketches.
