Automated Data Systems Manual, Standard Installation/Division Personnel System - United States Army Reserve: attachment 4. Data reference guide ,1985 *Mainframe Computer Systems* Stephen H. Kaisler,2020-10-22 This volume describes General Electric Corporation s venture into developing second and third generation mainframe computer systems The General Electric Corporation GE which began its life as the Edison Electric Co was long involved in electrical appliances and industrial machines It was also a founder of the Radio Corporation of America which eventually became one of its competitors and developed many electrical systems in order to control different types of industrial machines Its breakthrough into computing came with its winning bid to provide the computing systems for the Electronic Recording Method of Accounting system developed for the Bank of America by the Stanford Research Institute The success of this project led GE to develop the GE 200 series which was the foundation for commercial timesharing The GE 235 was selected by Dartmouth for its Dartmouth Time Sharing System DTSS an innovative academic time sharing system BASIC was developed on the GE 235 computer system under DTSS GE enhanced it to develop its Mark II III Time Sharing System apparently the first commercial time sharing service in the world GE develop the GE 300 400 systems for industrial process control The GE 600 series replaced the GE 200 series and demonstrated innovation in time sharing systems The GE 645 was

selected to host Multics which was developed by MIT However GE felt that it could not compete in computing against IBM Univac and other mainframes competitors so it folded its tent and sold its Computer Division to Honeywell Inc Nevertheless GE will be remembered for many innovations which continue to be used in modern computing systems

Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules In later chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems ,
