structure and professionalism external control from elected officials and local politics migrant s community association and economic contribution of migrants are the main conditions that impact on the responsiveness work of the local administration The findings also showed that anchored in the above five conditions administrative responsiveness also varies across the selected study areas This study also contributed by adding new insights about the mechanisms on how the local administration can address the issues of migrants who do not have a direct representation in the local government structure Accordingly for a better responsiveness work to migrants and to support the inclusion of migrants who do not have a direct political representation the study proposes recommendation for policy practice and research that targets on local administration responsiveness work to migrants

Hitler's Foreign Executioners Christopher Hale,2011-04-11 In Hitler s Foreign Executioners Heinrich Himmler s secret master plan for Europe is revealed an SS empire that would have no place for either the Nazi Party or Adolf Hitler His astonishingly ambitious plan depended on the recruitment of tens of thousands of Germanic peoples from every corner of Europe and even parts of Asia to build an SS Europa This revised and fully updated book researched in archives all over Europe and using first hand testimony exposes Europe s dirty secret nearly half a million Europeans and more than a million Soviet citizens enlisted in the armed forces of the Third Reich to fight a deadly crusade against a mythic foe Jewish Bolshevism Even today some apologists claim that these foreign SS volunteers were merely soldiers like any other and fought a decent war against Stalin s Red Army Historian Christopher Hale demonstrates conclusively that these surprisingly common views are mistaken By taking part in Himmler s murderous master plan these foreign executioners hoped to prove that they were worthy of joining his future SS Europa But as the Reich collapsed in 1944 Himmler s monstrous scheme led to bitter confrontations with Hitler and to the downfall of the man once known as loyal Heinrich

public authorities and private sports organizations The growing internationalization of sports inevitably increases the weight of global regulation yet each country maintains its own distinct regime of sports law and its own national and local sports organizations Sports law at a national or organizational level thus gains a growing relevance in comparative law The book describes and discusses both state created rules and autonomous self regulation regarding the variety of economic social commercial cultural and political aspects of sports activities Self regulation manifests itself in the form of by laws and encompasses organizational provisions disciplinary rules and rules of play However the trend towards more professionalism in sports and the growing economic social and cultural relevance of sports have prompted an increasing reliance on legal rules adopted by public authorities This form of regulation appears in a variety of legal areas including criminal law labour law commercial law tax law competition law and tort law and may vary following a particular type or sector of sport It is in this dual and overlapping context that such much publicized aspects as doping sponsoring and media and responsibility for injuries are legally measured This monograph fills a gap in the legal literature by giving academics practitioners sports organizations and policy makers access to sports law at this specific level Lawyers representing parties with interests in Poland will welcome this very useful guide and academics and researchers will appreciate its value in the study of comparative sports law

Using Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual's cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual's cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest

scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved

Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic
