Series		Indicative content
		<p>Extreme weather events are usually defined as being severe (hazardous / disastrous) or unexpected (i.e. outside the range of normal variation). Candidates are able to choose from a range of events, e.g. tropical cyclones, temperate storms, tornadoes, flooding, blizzards, heat waves, fires and drought.</p> <p>Characteristics may be linked to the intensity of the event (i.e. its magnitude), or duration and frequency of occurrence. Linked to this may be the vulnerability of people and the risks (economic / social) associated with particular events. Characteristics may also include ideas about scale of impacts, i.e. localised vs regional etc.</p> <p>Distribution will be controlled by particular event - expect reference to hurricanes (and concentrations at ITCZ etc), drought (Tropical), tornado (interior USA etc) and wildfires (e.g. SE Australia, southern Europe). Smaller scale events, e.g. flooding may have very localised distribution factors (relief, topography, land use, management / diversion schemes).</p>
Level	Mark	Descriptor
Level 1	1-4	Basic and generalised with one or two ideas only relating to chosen extreme weather. Likely does characteristics OR distribution, not both. Lacks structure and very limited use of geographical terminology. Considerable errors in language.
Level 2	5-7	Some ideas examined, but likely to be restricted either in range and or depth. Mentions both characteristics and distribution (could be a place). Some structure and some written language errors.
Level 3	8-10	Describes both characteristics and distribution of a particular event (may be unbalanced), providing depth and/or detail. Well structured; written language errors are rare.

**Algorithms - ESA 2010** Mark de Berg, Ulrich Meyer, 2010-08-30 This book constitutes the proceedings of the 18th Annual European Symposium on Algorithms held in Liverpool UK in September 2010 *Climate vulnerability assessment methodology* Lotten Wiréhn, 2017-11-27 Food security and climate change mitigation are crucial missions for the agricultural sector and for global work on sustainable development Concurrently agricultural production is directly dependent on climatic conditions making climate change adaptation strategies essential for the agricultural sector There is consequently a need for researchers planners and practitioners to better understand how why and to what extent agriculture is vulnerable to climate change Such analyses involve challenges in relation to the complex social ecological character of the agricultural system and to the multiple conceptualizations and approaches used in analysing vulnerability The aim of this thesis is to identify how vulnerability assessments can be used to represent climate related vulnerability in Nordic agriculture in order to advance the methodological development of indicator based and geographic visualization methods The following research questions are addressed i How can agricultural vulnerability to climate change and variability in the Nordic countries be characterized ii How do selections definitions and emphases of indicators influence how vulnerability is assessed iii How do estimates of vulnerability vary depending on the methods used in assessments iv How can geographic visualization be applied in integrated vulnerability assessments This thesis analyses and applies various vulnerability assessment approaches in the context of Nordic agriculture This thesis demonstrates that various methods for composing vulnerability indices result in significantly different outcomes despite using the same set of indicators A conceptual framework for geographic visualization approaches to vulnerability assessments was developed for the purpose of creating transparent and interactive assessments regarding the indicating variables methods and assumptions applied i e opening up the black box of composite indices This framework served as the foundation for developing the AgroExplore geographic visualization tool The tool enables the user to interactively select categorize and weight indicators as well as to explore the data and the spatial patterns of the indicators and indices AgroExplore was used in focus group settings with experts in the Swedish agricultural sector The visualization supported dialogue results confirm the difficulty of selecting and constructing indicators including different perceptions of what indicators actually indicate the assumption of linear relationships between the indicators and vulnerability and consequently that the direction of the relationship is predefined for each indicator This thesis further points at the inherent complexity of agricultural challenges and opportunities in the context of climate change as such It is specifically emphasized that agricultural adaptation policies and measures involve trade offs between various environmental and socio economic objectives and that their implementation could furthermore entail unintended consequences i e potential maladaptive outcomes Nevertheless it proved difficult to validate indicators due to e g matters of scale and data availability While heavy precipitation and other extreme weather events are perceived as the most relevant drivers of climate vulnerability by the

agricultural experts participating in this study statistical analyses of historical data identified few significant relationships between crop yield losses and heavy precipitation In conclusion this thesis contributes to the method development of composite indices and indicator based vulnerability assessment A key conclusion is that assessments are method dependent and that indicator selection is related to aspects such as the system s spatial scale and location as well as to indicator thresholds and defined relationships with vulnerability recognizing the contextual dependency of agricultural vulnerability Consequently given the practicality of indicator based methods I stress with this thesis that future vulnerability studies must take into account and be transparent about the principles and limitations of indicator based assessment methods in order to ensure their usefulness validity and relevance for guiding adaptation strategies

**Handbook of Approximate Bayesian Computation** Scott A. Sisson,Yanan Fan,Mark Beaumont,2018-09-03 As the world becomes increasingly complex so do the statistical models required to analyse the challenging problems ahead For the very first time in a single volume the Handbook of Approximate Bayesian Computation ABC presents an extensive overview of the theory practice and application of ABC methods These simple but powerful statistical techniques take Bayesian statistics beyond the need to specify overly simplified models to the setting where the model is defined only as a process that generates data This process can be arbitrarily complex to the point where standard Bayesian techniques based on working with tractable likelihood functions would not be viable ABC methods finesse the problem of model complexity within the Bayesian framework by exploiting modern computational power thereby permitting approximate Bayesian analyses of models that would otherwise be impossible to implement The Handbook of ABC provides illuminating insight into the world of Bayesian modelling for intractable models for both experts and newcomers alike It is an essential reference book for anyone interested in learning about and implementing ABC techniques to analyse complex models in the modern world

**New Public Leadership** Douglas F. Morgan, Marcus D.

Ingle, Craig W. Shinn, 2018-09-03 Most leadership literature stems from and focuses on the private sector emphasizing personal qualities that bind leaders and followers to a shared purpose. As the authors of *New Public Leadership* argue, if these shared purposes do not build trust and legitimacy in public institutions, such traditional leadership tropes fall short of the standard demanded by contemporary public servants. For twenty years, the authors have been developing a leadership education and training framework specifically designed to encourage public service professionals to lead from where they sit. This book presents that comprehensive, integrated, and practical leadership framework grounded in the uniqueness of public legal missions, culture, history, and values. The authors explore three key elements of leadership success: 1) an understanding of our public service context, including the history, the values, and the institutions that comprise our leadership setting; 2) a set of tools designed to help leaders initiate collective action in wicked challenge settings; and 3) tools to support sound judgment, enabling leaders to do the right thing in the right circumstances for the right reasons. The authors further provide readers with a basic understanding of democratic institutions, encouraging them to work within and across multiple vertical and horizontal systems of authority. The book is organized into four sections, each of which is accompanied by a Master Case that provides the reader with an opportunity to apply the principles and leadership tools discussed in the text to practice. To further reinforce the practice-centered approach to leadership knowledge and skills, the authors have developed an accompanying *EMERGE Leadership Handbook*, complete with exercises available online. Written specifically with the practicing public manager in mind, this book arms public servants with a large repertoire of leadership skills designed to accommodate changing public values and conflicting priorities at all levels of our public organizations.
