**Journal of the National Cancer Institute** ,1990 Application of LC-MS/MS in the Mycotoxins Studies Laura

Gámiz-Gracia, Ana M. García-Campaña, Natalia Arroyo-Manzanares, 2020-06-17 Mycotoxins are secondary metabolites produced by the fungi of different species mainly *Aspergillus*, *Fusarium* and *Penicillium* with toxic effects for humans and animals. These mycotoxins can contaminate food and feed. The European Union (EU) has established the maximum permitted or recommended levels for well known mycotoxins in different foodstuffs. However, there are other mycotoxins that are not included in the regulations: the emerging mycotoxins whose toxicity is still not clear and the modified or masked mycotoxins produced as a consequence of a detoxification strategy of the host plant of the fungus or during food processing. These mycotoxins could pose a risk and should also be taken into account. In order to assure consumers' health, analytical methods for the accurate determination of mycotoxins in different food matrices and feeds are required. In this sense, liquid chromatography tandem mass spectrometry (LC-MS/MS) is a powerful tool for their unique identification and quantification. Moreover, the use of high resolution mass spectrometry (HRMS) allows one to identify novel mycotoxins and targeted/untargeted approaches for study. This Special Issue compiles recent applications of LC-MS/MS in mycotoxin studies as well as the development and validation of new analytical methods for their identification and quantification in different food matrices and feed occurrence studies and the biomonitoring of mycotoxins and their metabolites in biological fluids. Strategic Advancements in Utilizing Data Mining and Warehousing Technologies: New Concepts and Developments Tanir, David, Rusu, Laura Irina, 2009-12-31 This book presents and disseminates new concepts and developments in the areas of data warehousing and data mining in particular on the research trends shaped during the last few years.
