SAE Standard applies to refrigerant vapor compression systems that provide cooling and or heating for passenger cars light
trucks and commercial vehicles on and off road that use automotive type mobile air conditioning MAC systems Large trucks
buses and other vehicles that do not use typical automotive a c systems or use refrigerants not listed in this document are not
covered by this standard This standard covers any vehicle with a MAC system using a belt or electric motor driven
compressor This document provides standards for design assembly test and service of MAC systems to minimize
environmental health and safety impacts Also included are cautionary statements for the service industry to alert technicians
to the inadvisability and possible health or safety effects associated with venting refrigerant during service It is not intended
to restrict the use or further development of other types of refrigeration systems for mobile air conditioning applications This
document may be amended or additional safety standards created should other systems become practical This document
addresses only HFC 134a R 134a carbon dioxide R 744 and HFO 1234yf R 1234yf refrigerants To prevent system
contamination all refrigerants used in mobile air conditioning vapor compression systems require unique service fittings and
service equipment The unique service fittings are intended to eliminate the potential for system refrigerant cross
contamination during service activity CFC 12 R 12 is no longer in use in new MAC systems The service fitting description is
maintained as a reference for older vehicles still in use When retrofitting an R 12 system to use R 134a or when removing R

recovery and recycle equipment HFC 152a is an A2 flammable refrigerant as classified by ASHRAE 34 and should be used
only with a secondary loop application However until MAC systems are developed to use R 152a HFC 152a no SAE Standards
for system design service equipment or service procedures have been established The R 152a service fittings described
within this Standard were established as part of the industries evaluation of replacement refrigerants and are maintained for
future design guidance and to prevent potential refrigerant cross contamination This document covers refrigerant system
design and safety related requirements for refrigerants used in mobile air conditioning MAC systems and is being revised to
comprehend R 1234yf The current wording of 4 1 1 prohibits refrigerants that are rated less than A2L which would exclude R

152a Later in the document J639 defines the fittings for R 152a The intent of this revision is to insure safe mobile air conditioning systems by forcing proper risk assessments and appropriate design solutions while correcting this conflict with regards to R152a
