

ANSWERS - Critical Angle and Total Internal Reflection

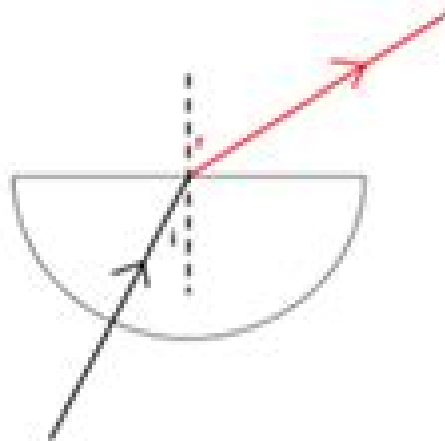

Complete the passages below by filling in the missing words and completing the diagrams and formulae:

| | | | |
|-----------|------------|----------|------------|
| swap | refraction | towards | reflective |
| slower | reflection | confuse | away from |
| incidence | refractive | critical | faster |

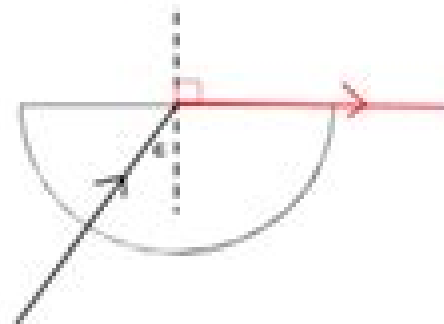

When light leaves a denser (and so **slower**) medium, it refracts **away from** the normal rather than **towards** it. Because of this, the angles of **incidence** and **refraction** effectively **swap** places in the formula for **refractive** index:

$$n = \frac{\sin r}{\sin i}$$

If the angle is small enough, it looks like this:

If the angle of incidence is exactly right, however, this will give an angle of refraction of exactly 90°:

The angle of incidence in this case is called the **critical angle (c)** of the material.
