Geographic Information Science Martin Raubal, Harvey J. Miller, Andrew U. Frank, Michael F. Gooch, 2006-09-21

This book constitutes the refereed proceedings of the 4th International Conference on Geographic Information Science GIScience 2006. The book presents 26 revised full papers. Among traditional topics addressed are spatial representations and data structures, spatial and temporal reasoning, computational geometry, spatial analysis, and databases. Many papers deal with navigation, interoperability, dynamic modeling, ontology, and semantics. Geosensors, location, privacy, social issues, and GI research networks rank among the new directions covered.

Modern Electroplating Mordechai Schlesinger, Milan Paunovic, 2014-12-22. The definitive resource for electroplating, now completely up to date. With advances in information age technologies, the field of electroplating has seen dramatic growth in the decade since the previous edition of *Modern Electroplating* was published. This expanded new edition addresses these developments, providing a comprehensive one-stop reference to the latest methods and applications of electroplating of metals, alloys, semiconductors, and conductive polymers. With special emphasis on electroplating and electrochemical plating in nanotechnologies, data storage, and medical applications, the Fifth Edition boasts vast amounts of new and revised material unmatched in breadth and depth by any other book on the subject. It includes easily accessible, self-contained contributions by over thirty experts. Five completely new chapters and hundreds of additional pages. A cutting-edge look at applications in nanoelectronics. Coverage of the formation of nanoclusters and quantum dots using scanning tunneling microscopy (STM). An important discussion of the physical properties of metal thin films. Chapters devoted to methods, tools, control, and environmental issues. And much more. A must-have for anyone in electroplating, including technicians, platers, plating researchers, and metal finishers. *Modern Electroplating*, Fifth Edition, is also an excellent reference for electrical engineers and researchers in the automotive, data storage, and medical industries.

Fundamentals of Spatial Information Systems Robert Laurini, Derek Thompson, 1992-03-09. The study and application of spatial information systems have been developed primarily from the use of computers in the geosciences. These systems have the principal functions of capturing, storing, representing, manipulating, and displaying data in 2-D and 3-D worlds. This book approaches its subject from the perspectives of informatics and geography, presenting methods of conceptual modeling developed in computer science that provide valuable aids for resolving spatial problems. This book is an essential textbook for both students and practitioners. It is indispensable for academic geographers, computer scientists, and the GIS professional. Serves as the first comprehensive textbook on the field of Spatial Information Systems, also known as Geographic Information Systems. Contains extensive illustrations. Presents numerous detailed examples.
