indicated that the current way many people prepare their slide presentations may actually hinder learning. Considering the ubiquity of the PowerPoint presentation in business and in education, presenters should be concerned whether or not their audience members are effectively receiving the information they wish to impart. This issue is of special import for librarians who teach as they often must convey complex information in a very limited amount of time. Combining the best evidence on multimedia learning with real world practical guidelines, this book aims to provide novice and expert presenters alike with the tools they need to ensure an effective learner centred presentation. Presents guidelines and techniques based on evidence from the research literature. Provides an easy to understand introduction to the relevant learning and instructional design theories behind effective learner centred presentations. Covers techniques for Microsoft PowerPoint, Apple Keynote and Star Office Impress.

Modern Physical Chemistry G.H. Duffey, 2013-11-11 In this new textbook on physical chemistry fundamentals are introduced simply yet in more depth than is common. Topics are arranged in a progressive pattern with simpler theory early and more complicated theory later. General principles are induced from key experimental results. Some mathematical background is supplied where it would be helpful. Each chapter includes worked out examples and numerous references. Extensive problems, review and discussion questions are included for each chapter. More detail than is common is devoted to the nature of work and heat and how they differ. Introductory Caratheodory theory and the standard integrating factor for dGrev are carefully developed. The fundamental role played by uncertainty and symmetry in quantum mechanics is emphasized. In chemical kinetics various methods for determined rate laws are presented. The key mechanisms are detailed. Considerable statistical mechanics and reaction rate theory are then surveyed. Professor Duffey has given us a most readable

easily followed text in physical chemistry *Acting Lessons for Teachers* Robert T. Tauber, Cathy S. Mester, 2006-11-30

Acting Lessons for Teachers presents a solid theoretical foundation for the pedagogical benefits of enthusiastic teaching. Simply put, students are more engaged, misbehave less, and learn better from teachers who teach enthusiastically. A teacher's enthusiasm for his or her subject matter can be contagious. Since the dynamic of the classroom is similar to that of the stage in terms of speaker-listener relationships, the acting craft offers teachers a model for the skills and strategies that could be incorporated in their work to convey more enthusiasm for the material and for the students. This book presents concrete descriptions of the specific acting strategies that would benefit the teacher: physical and vocal animation, teacher role playing, strategic entrances and exits, humor, props, suspense and surprise, and creative use of space. Special attention is given to the potential advantage of instructional technology as a modern-day prop. Strategies are explained in terms of their importance and ease of incorporation into the classroom. Each is proposed as a skill that can be learned by any teachers who have the desire to enliven their teaching. Student descriptions of their own experience with teachers' use of acting strategies add real examples for each lesson. Finally, testimony of award-winning classroom teachers from a variety of disciplines and age levels provides evidence of the wide and easy applicability of these strategies.

The Conflict of the Ages Student Edition I: the Scientific History of Origins Michael J. Findley, Mary C. Findley, 2016

The Conflict of the Ages is a Multi-Part exploration of History, Science, and ancient Literature. This first installment covers the concepts of God, time, Creation, physics, cosmology, and specifics about each day of Creation. We make comparisons with ancient sources to see where they agree with the Scriptural account. We reference classic and modern scientific views, exposing errors, preconceptions, presuppositions, and falsehoods taught as fact by the mainstream scientific community. God is the first witness, and the Bible, the first eyewitness account of beginnings and origins. Other ancient documents contain at least some truths and parallel accounts.
