**Big-Game Hunting** John D. Speth, 2010-09-08 Since its inception paleoanthropology has been closely wedded to the idea that big game hunting by our hominin ancestors arose first and foremost as a means for acquiring energy and vital nutrients This assumption has rarely been questioned and seems intuitively obvious meat is a nutrient rich food with the ideal array of amino acids and big animals provide meat in large convenient packages Through new research the author of this volume provides a strong argument that the primary goals of big game hunting were actually social and political increasing hunter's prestige and standing and that the nutritional component was just an added bonus Through a comprehensive

interdisciplinary research approach the author examines the historical and current perceptions of protein as an important nutrient source the biological impact of a high protein diet and the evidence of this in the archaeological record and provides a compelling reexamination of this long held conclusion This volume will be of interest to researchers in Archaeology Evolutionary Biology and Paleoanthropology particularly those studying diet and nutrition **Fennema's Food Chemistry** Srinivasan Damodaran,Kirk L.
